Reading Time: 2 min

This guide walks you through the first things to do on your new WebsiteWorks website: add your name and logo, change the text on a page, publish it and look at the result.

Step 1: Open the Quick start guide

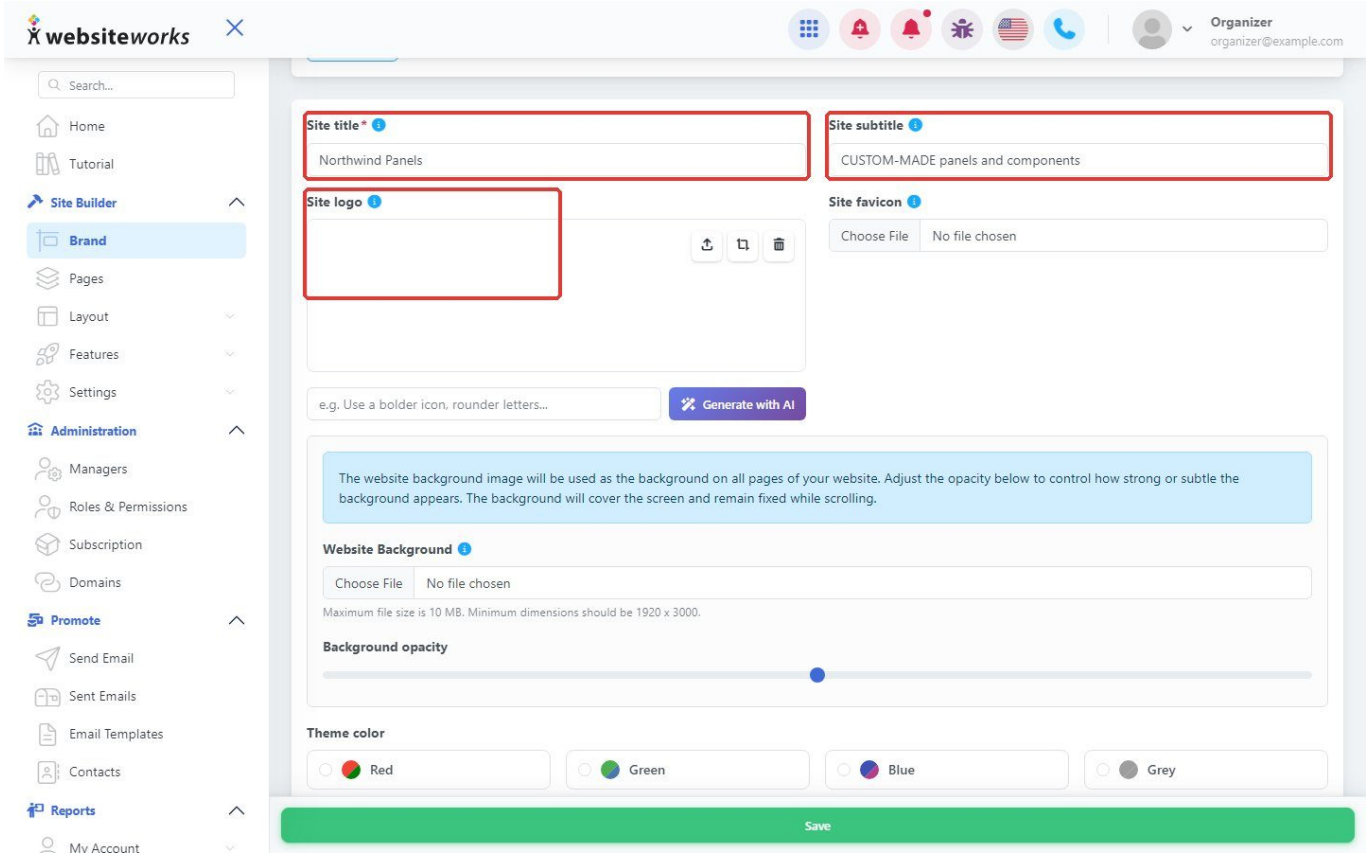

Sign in to your dashboard. The **Home** page shows the **Quick start guide** with the most useful first steps.

Start from the Quick start guide.

Step 2: Add your site title and logo

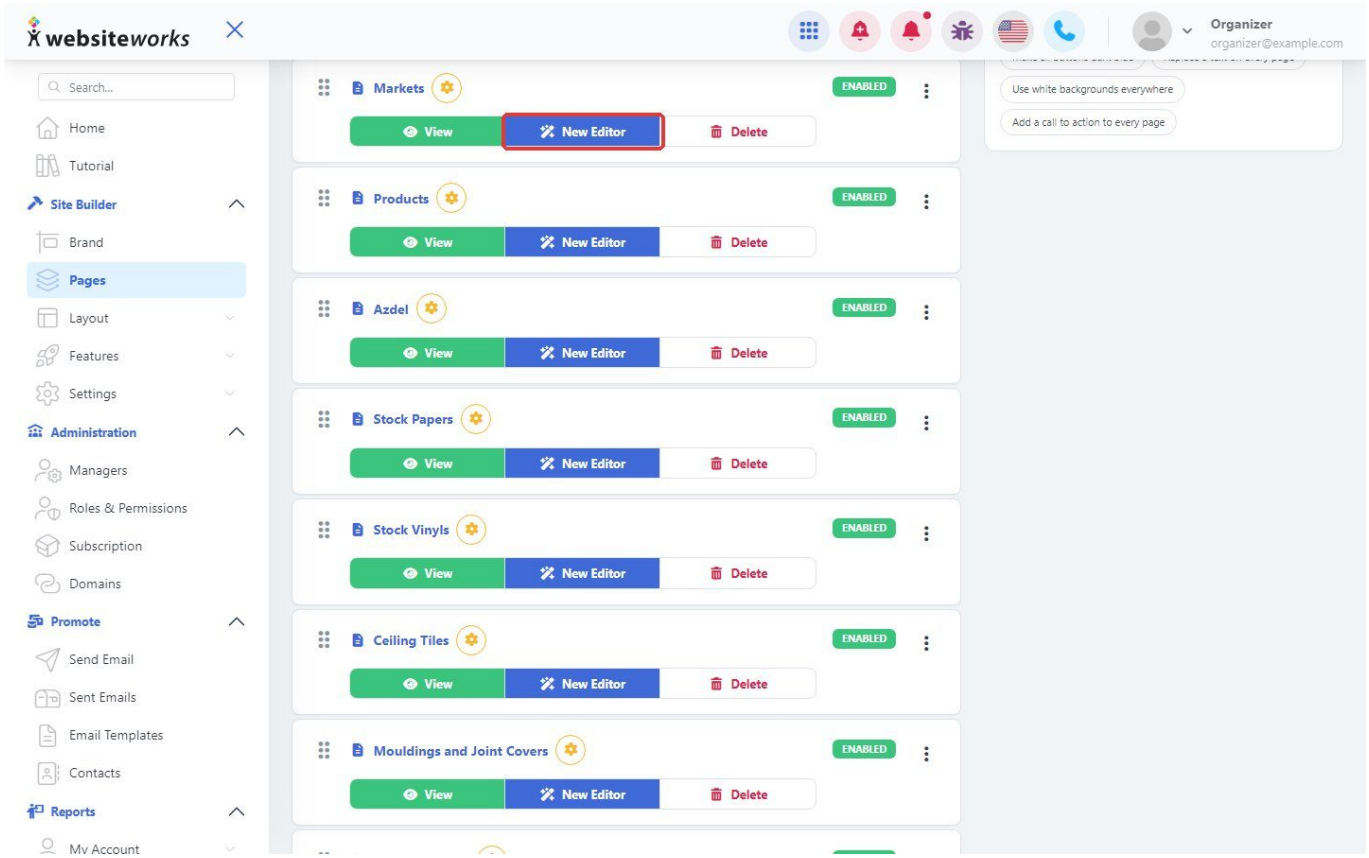

In the menu, click **Brand**. Enter your **Site title** and **Site subtitle**, then upload your **Site logo**. Click **Save** at the bottom of the page.

Enter your title and upload your logo.

Step 3: Open a page in the editor

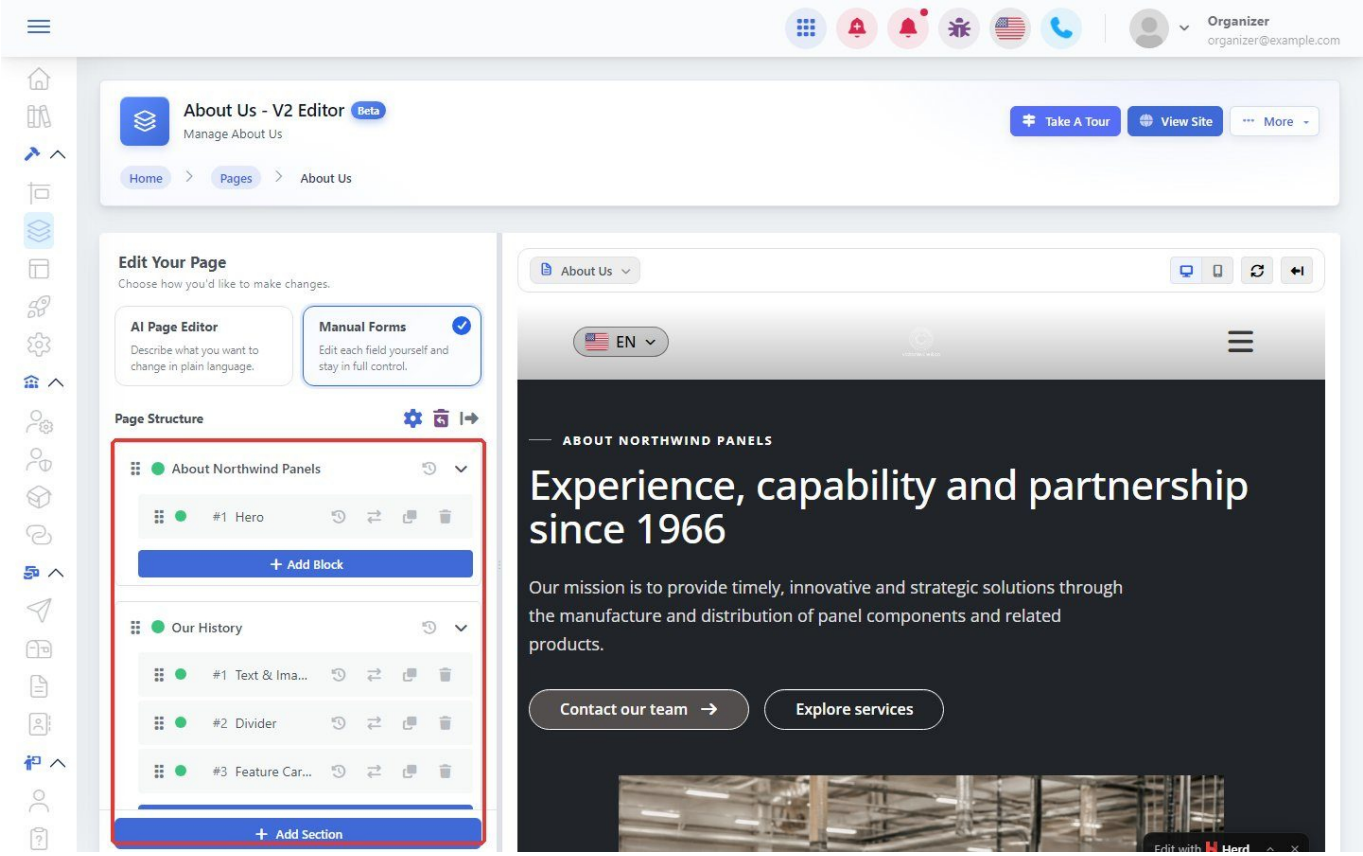

In the menu, click **Pages**. Next to the page you want to change, click **New Editor**.

Click New Editor next to a page.

Step 4: Choose Manual Forms and pick a block

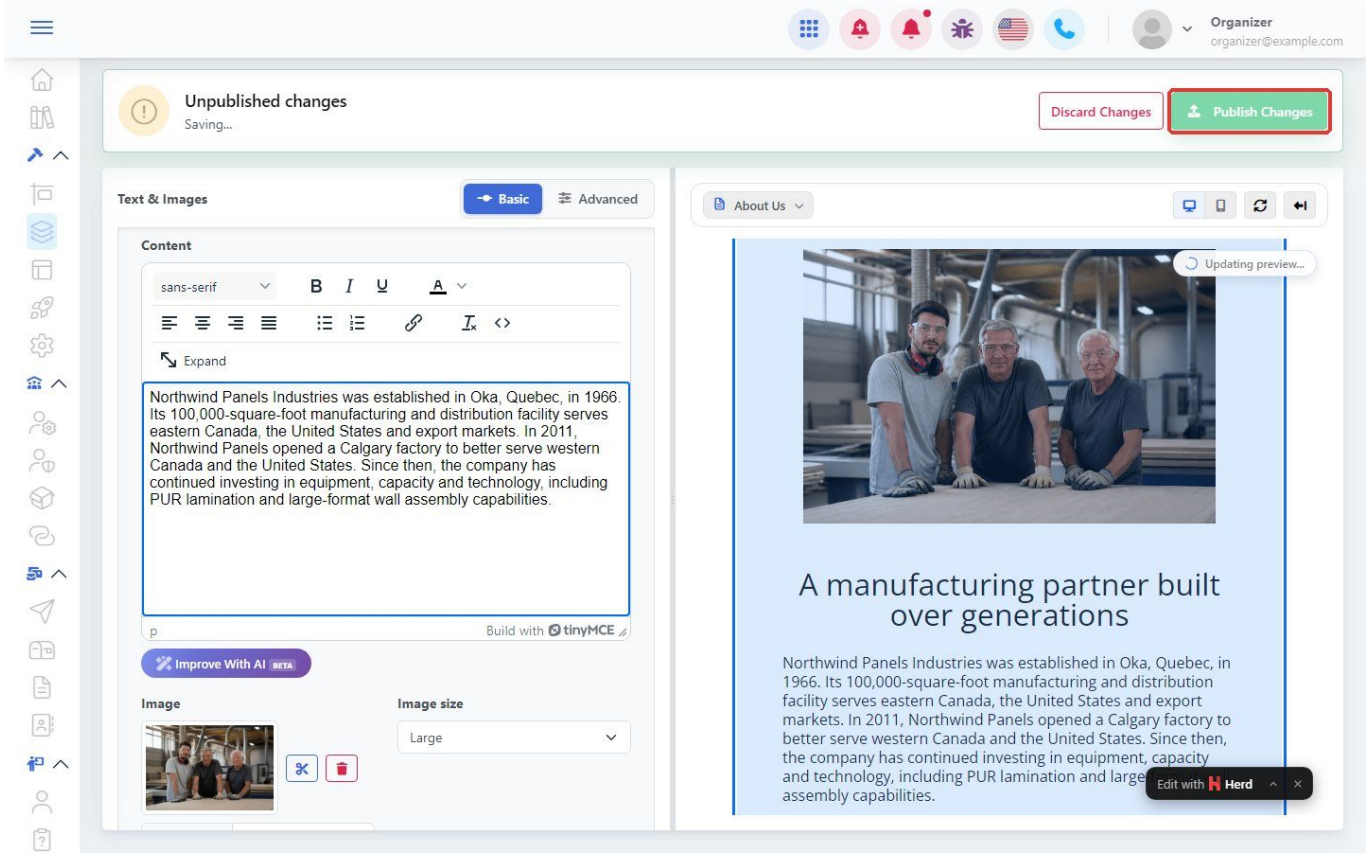

The editor asks how you want to edit. Choose **Manual Forms**. The **Page Structure** panel lists the sections and blocks on your page. Click a block to edit it.

Click a block in Page Structure.

Step 5: Change your text and publish

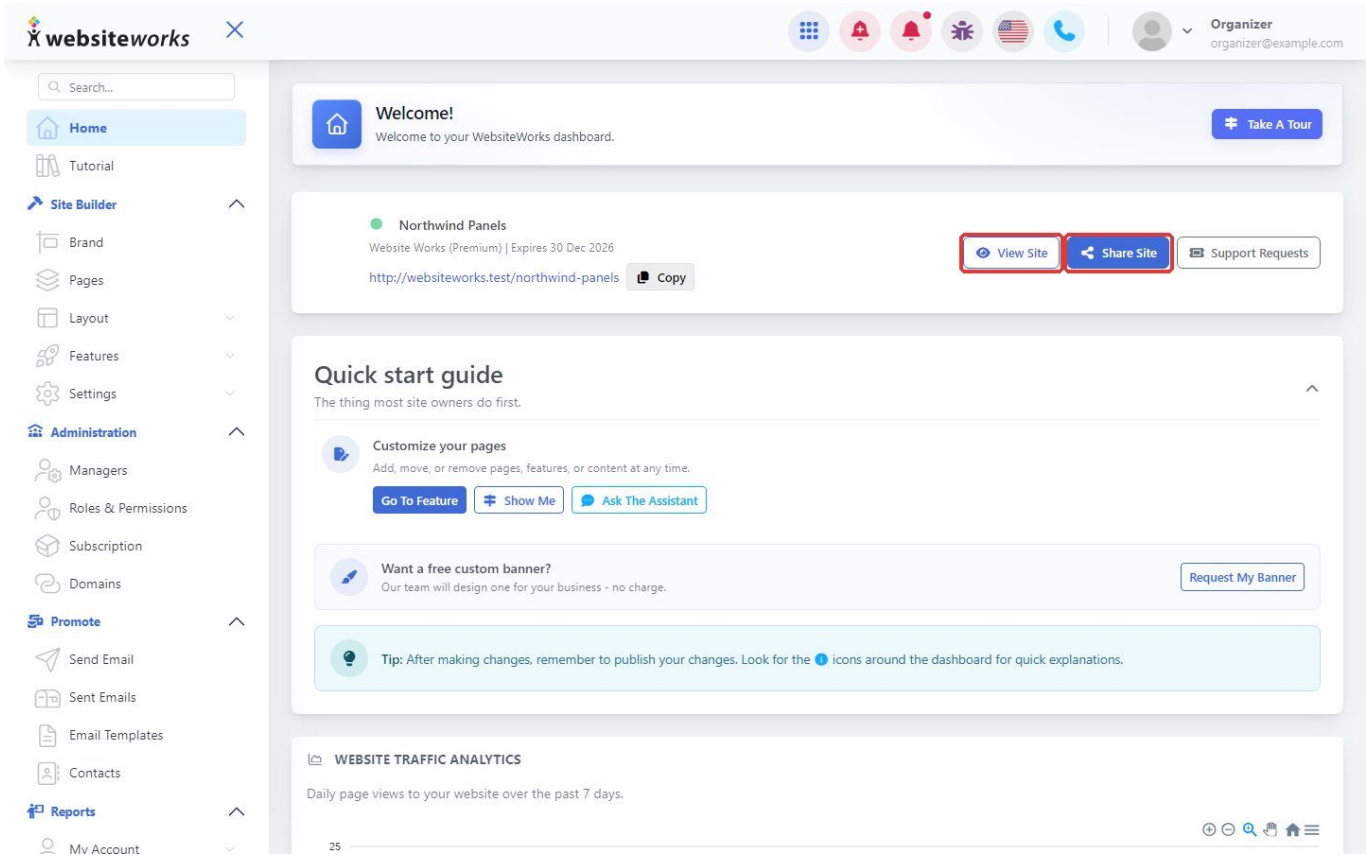

Edit the text in the block settings. The preview on the right updates as you type. Your edits are saved as a draft and the bar at the top shows **Unpublished changes**. When you are happy, click **Publish Changes** to put them on your live website. Click **Discard Changes** to undo them instead.

Click Publish Changes.

Step 6: View your website

Go back to **Home** and click **View Site** to open your live website. Click **Share Site** to copy its link or share it.

View or share your website.
