Reading Time: 1 min

You can change where pages appear in your menu, hide a page without deleting it, or delete pages you no longer need.

Step 1: Change the menu order

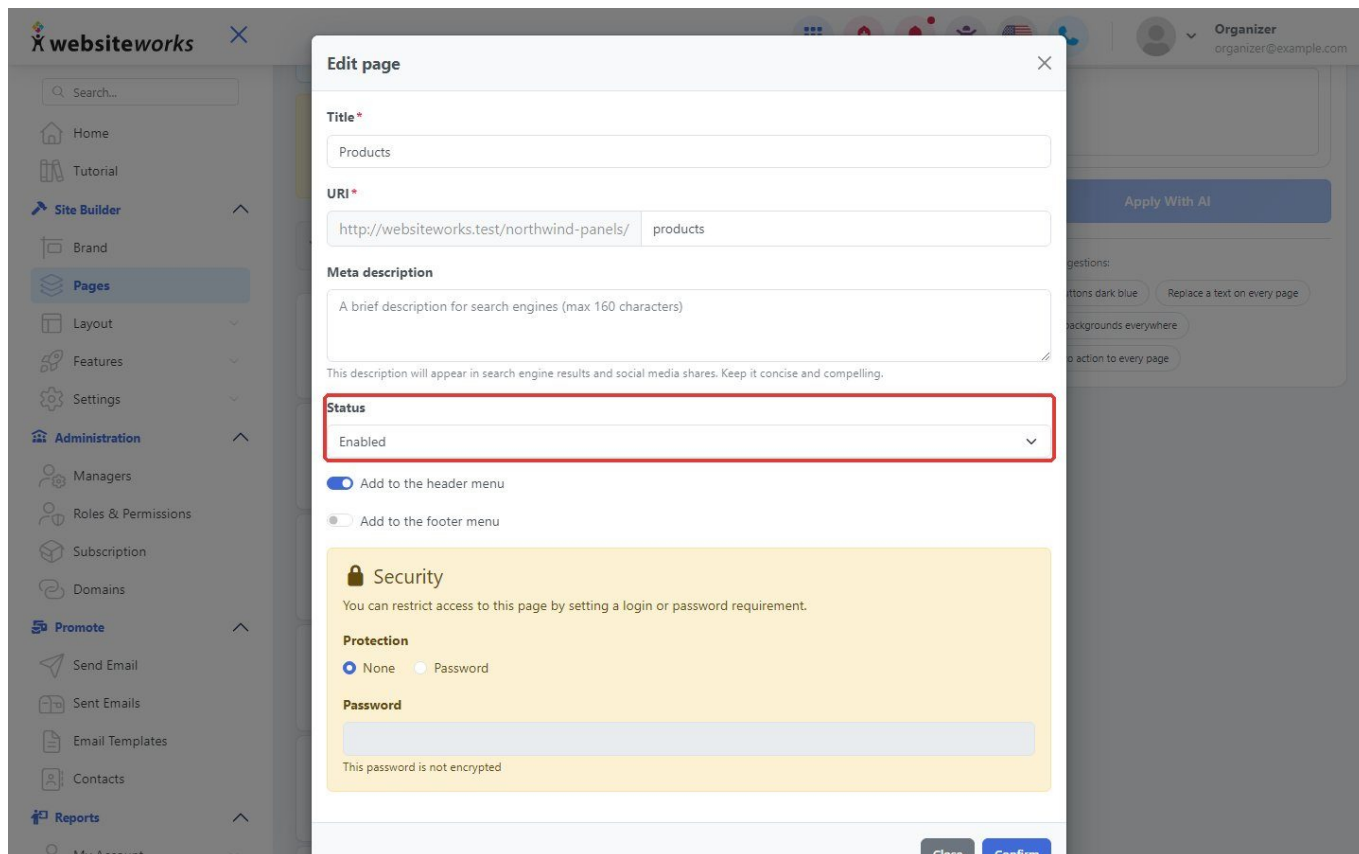

The order of your menu is set in **Layout → Header & Menu**, on the **Menu items** tab. Drag an item by its handle to move it. The order of the Pages list does not change your menu.

The screenshot shows the Website Works interface. On the left is a sidebar with navigation options: Home, Tutorial, Site Builder, Brand, Pages, Layout, Header & Menu (selected), Banner, Footer, Features, Settings, Administration, Managers, Roles & Permissions, Subscription, Domains, Promote, Send Email, Sent Emails, and Email Templates. The main content area is titled 'Header & Menu' and includes a 'Take A Tour' button. Below this is a section for 'Northwind Panels' with a 'View Site' button and a 'Share Site' button. The 'Menu items' tab is selected, showing a list of menu items: Home, Services, Markets, and Products. A red box highlights the 'Menu items' section with instructions: 'Drag to reorder: Drag an item under a dropdown to make a sub-menu. Click a name to change the menu label. The page title stays the same.' The 'Preview' section shows a mobile view of the website header.

Drag menu items to reorder.

Step 2: Hide a page

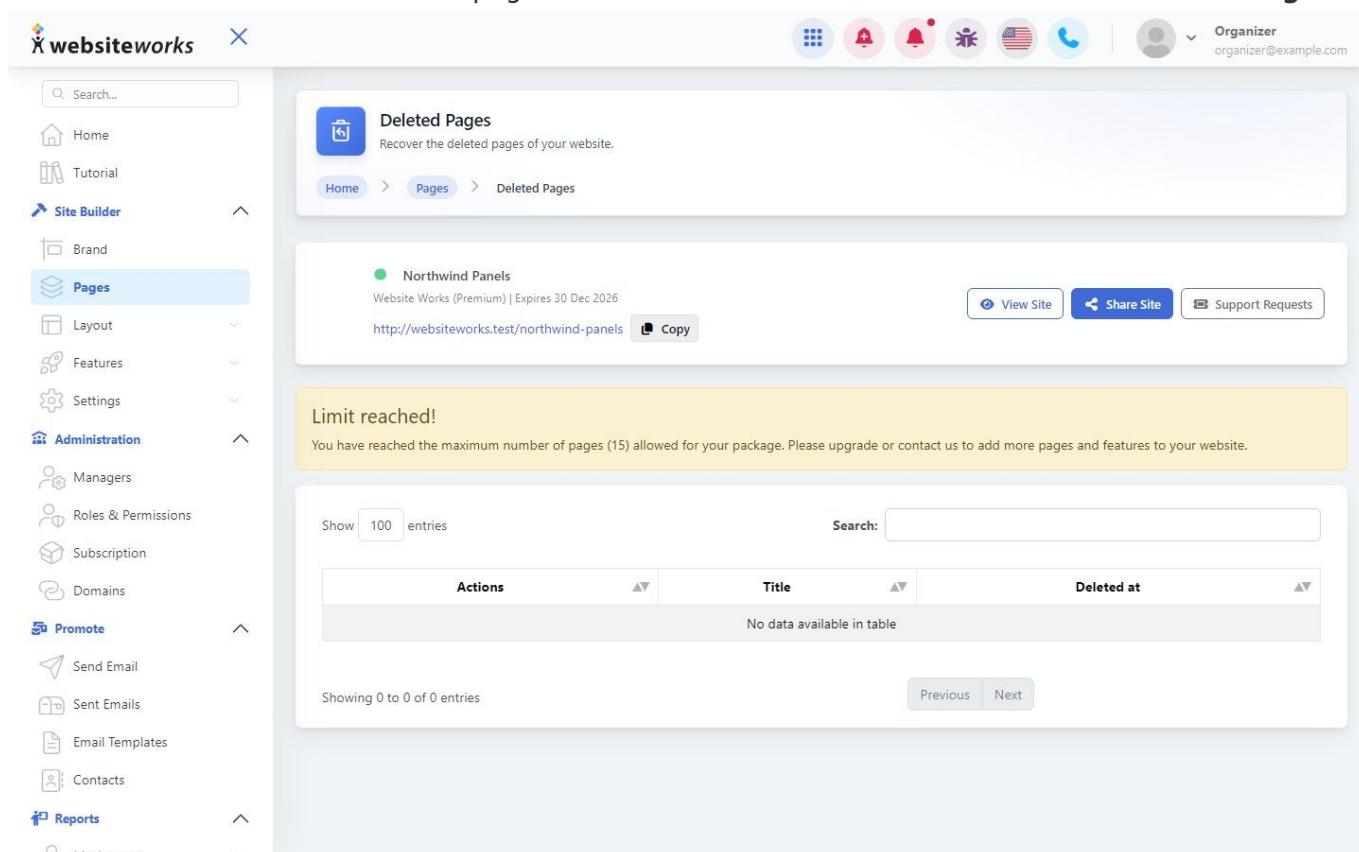

In **Pages**, open the page settings and set **Status** to **Disabled**, then click **Confirm**. Visitors can no longer see the page, but you keep it.

Set Status to Disabled.

Step 3: Delete a page

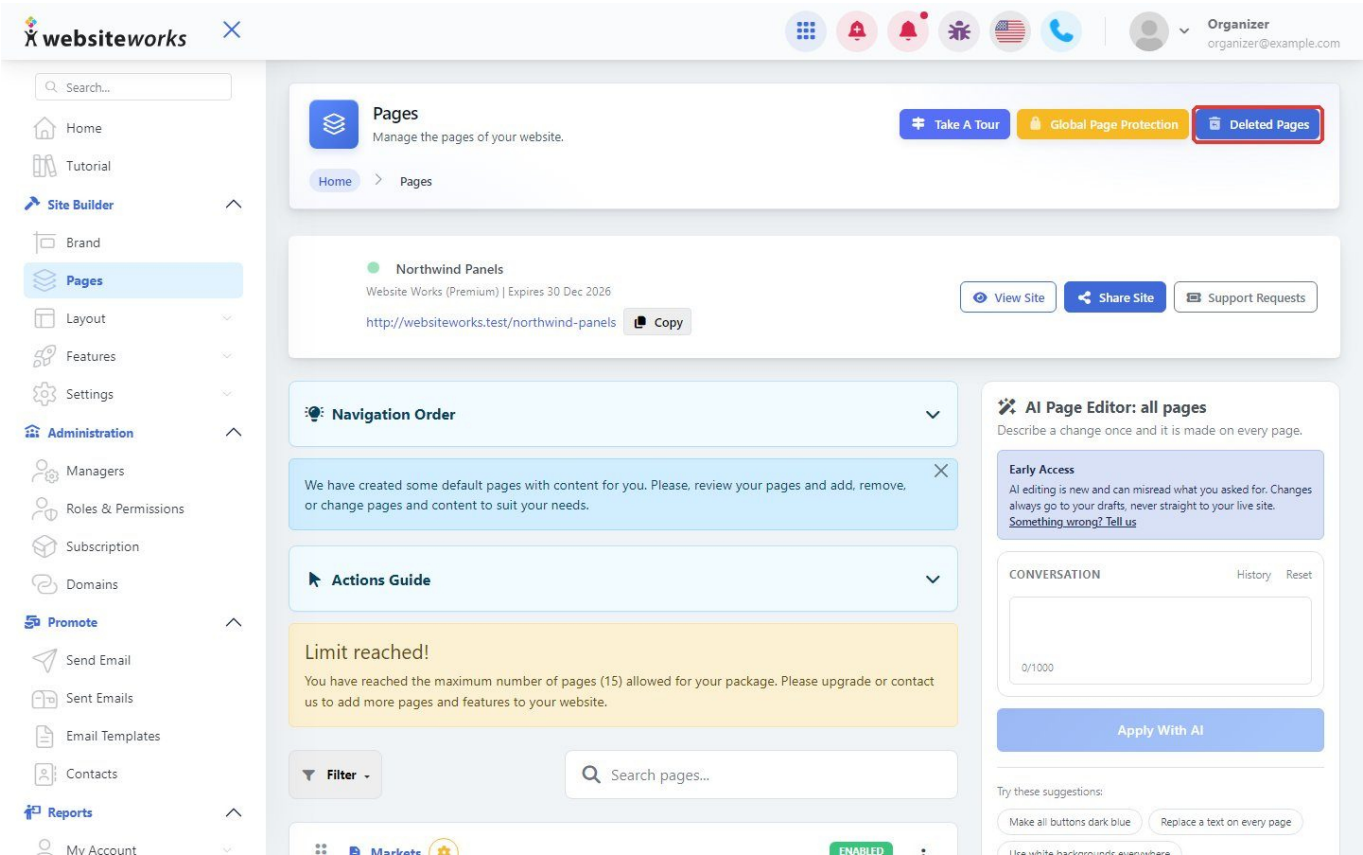

Click the delete button next to the page and confirm. You can restore it later under **Deleted Pages**.

Deleted pages can be restored.

Step 4: Restore a deleted page

On the **Pages** page, click **Deleted Pages** to see the pages you deleted and restore one.

Click Deleted Pages.
