

Editing, moving and removing blocks

Category: Content Blocks

Published: Oct 26, 2026

Reading Time: 1 min

Once a page has blocks, you can change them, move them around, copy them or remove them.

Step 1: Select a block

Open the page with **New Editor** and choose **Manual Forms**. In **Page Structure**, click the block you want to change.

The screenshot displays the 'About Us - V2 Editor' interface. At the top, there's a header with navigation links like 'Home', 'Pages', and 'About Us'. Below this, the 'Edit Your Page' section offers two modes: 'AI Page Editor' and 'Manual Forms' (which is selected). The 'Page Structure' panel on the left lists sections: 'About Northwind Panels', '#1 Hero', 'Our History', '#1 Text & Ima...', '#2 Divider', and '#3 Feature Car...'. A red box highlights the '#1 Text & Ima...' block. The main preview area on the right shows a dark-themed 'About Northwind Panels' page with the headline 'Experience, capability and partnership since 1966' and a mission statement.

Click a block.

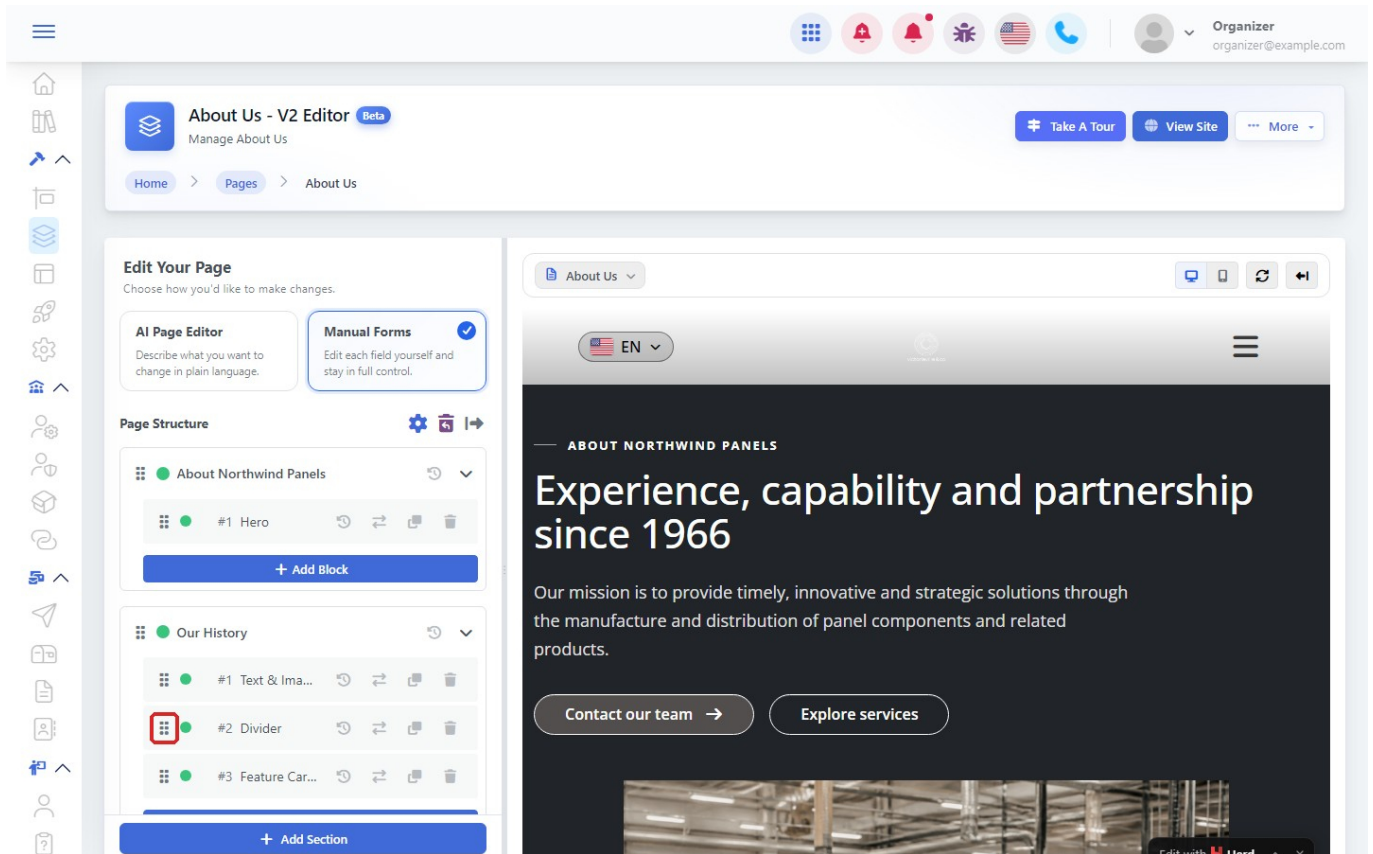

Step 2: Edit its content

Change the fields in **Block Settings**. The preview updates as you type.

- **History:** see earlier versions of the block and go back to one.
- **Duplicate:** add a copy of the block.
- **Delete:** remove the block.

Step 4: Move a block

In **Page Structure**, drag the block by its handle to a new place. Then click **Publish Changes**.

Drag to move.
