Want to know if people are visiting your website? Your dashboard home shows a **Website Traffic Analytics** chart with your daily page views for the past 7 days. This chart is part of the **Premium** plan.

Step 1: Find the traffic chart

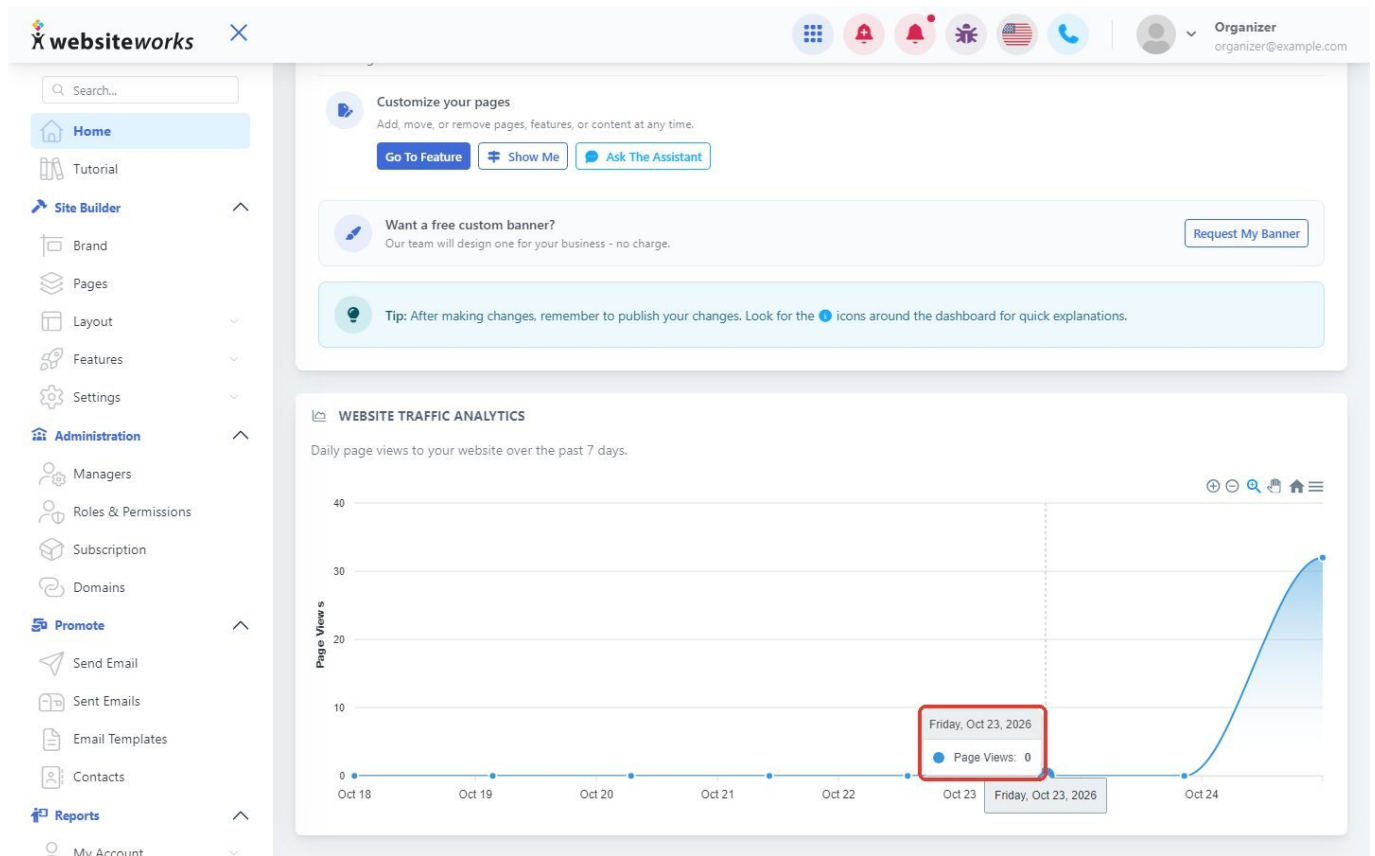

Click **Home** in the menu, then scroll down to **Website Traffic Analytics**. Each point on the line is one day. The higher the line, the more pages your visitors viewed that day.

Daily page views for the past 7 days.

Step 2: See the numbers for one day

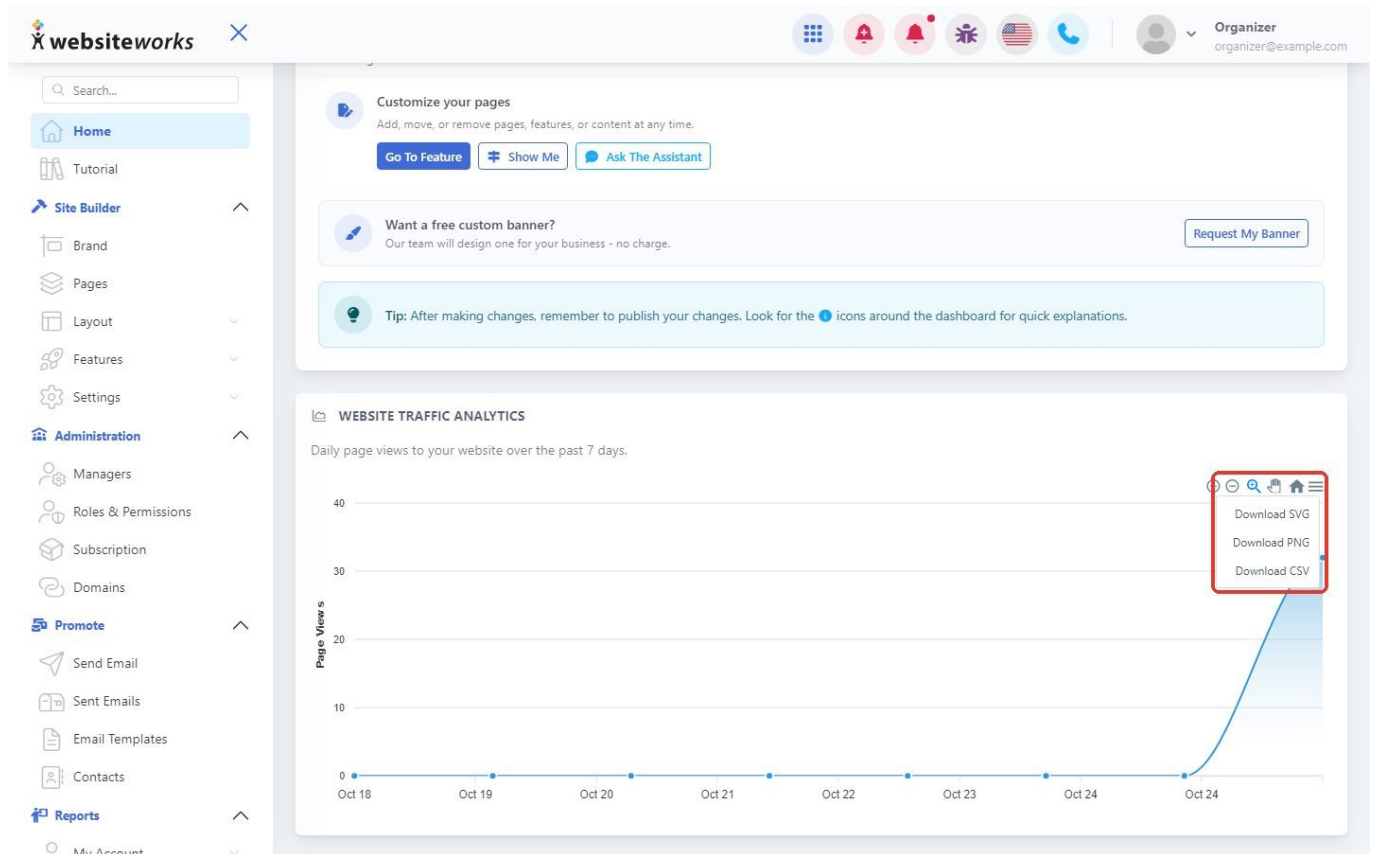

Move your mouse over a point on the line. A small box shows the date and the number of **Page Views** for that day.

Hover a day to see its page views.

Step 3: Download the chart

Click the menu icon at the top right of the chart, then choose **Download SVG** or **Download PNG** for a picture, or **Download CSV** for the numbers in a spreadsheet. You can also use the small icons there to zoom in and out.

Download the chart as an image or a CSV file.

Tip: Page views go up after you share your website. Copy your site address with the **Copy** or **Share Site** buttons at the top of the dashboard and send it to your customers.
