My changes aren't showing on my live website

Made changes but your website still looks the same? Here's what to check.

Step 1: See your unpublished changes

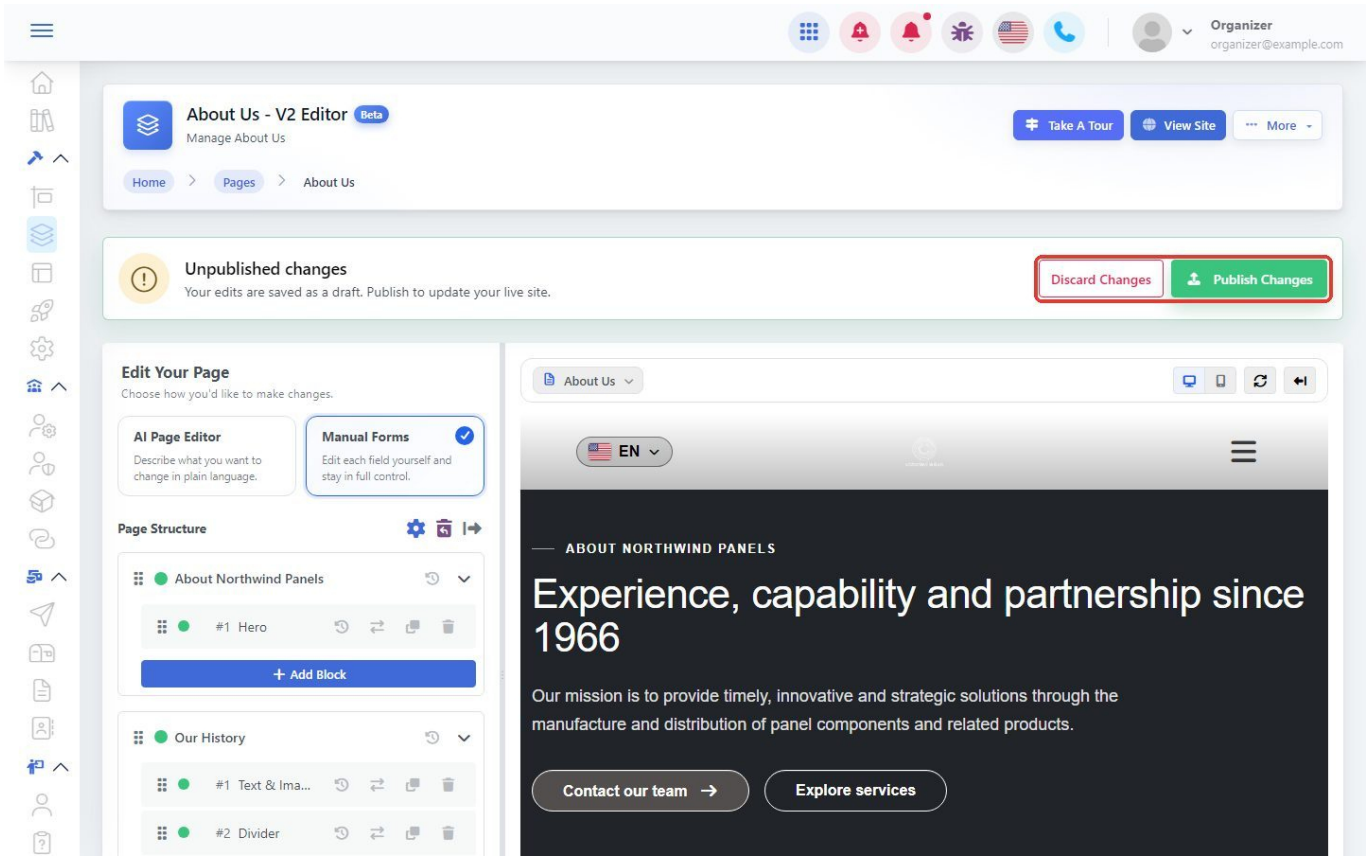

When you edit a page, your edits are saved as a draft first. Your visitors don't see them until you publish. When you have unpublished edits, a bar at the top of the editor says **Unpublished changes**.

Your edits are a draft until you publish them.

Step 3: Publish your changes

Click **Publish Changes** to update your live site.

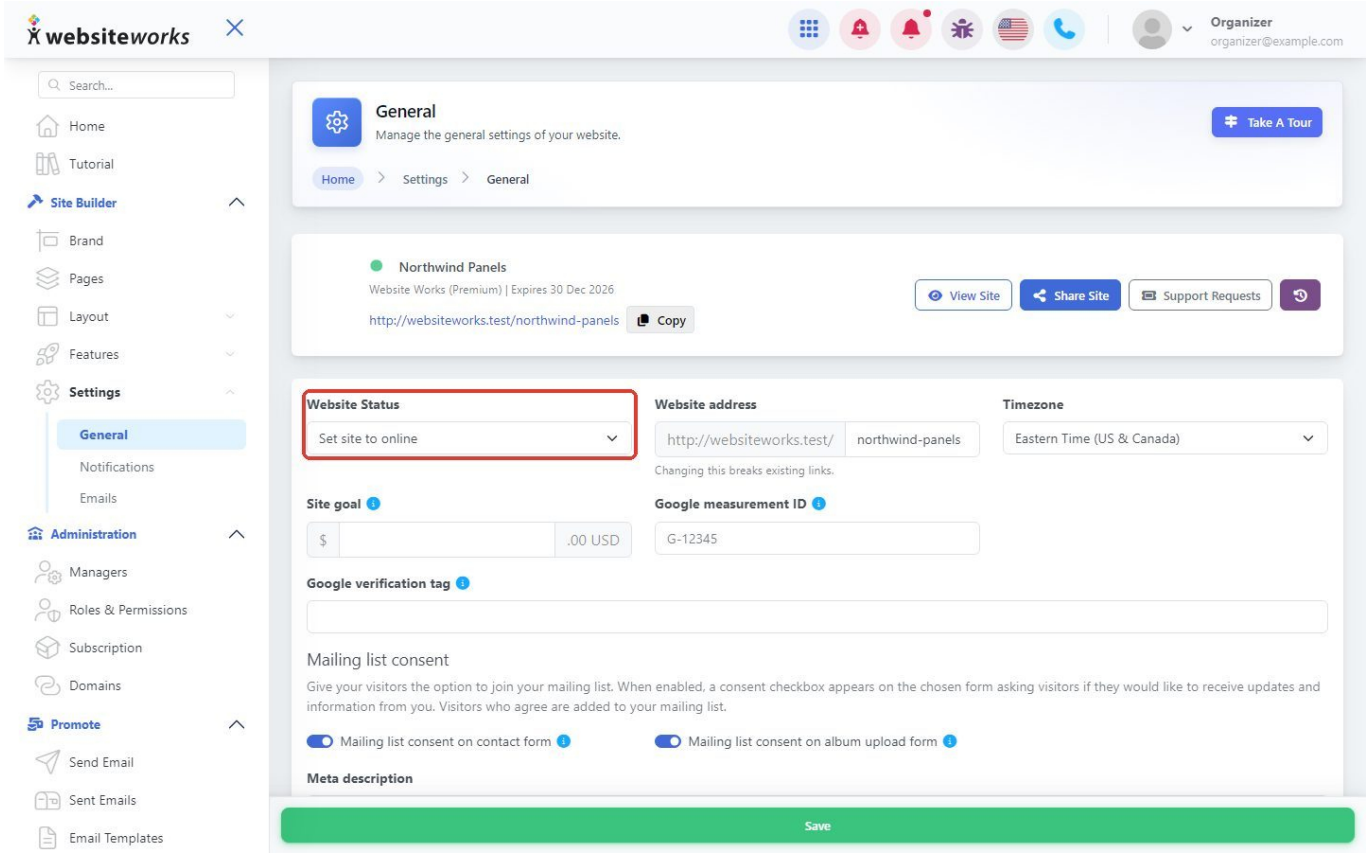

Click Publish Changes.

You'll see the message **All changes have been published and are now live.** Click **Discard Changes** only if you want to throw away your draft.

Step 3: Check that your website is online

In the menu, click **Settings**, then **General**. Under **Website Status**, make sure **Set site to online** is selected. If it says **Set site to offline**, visitors can't see your website. Change it to online and click **Save**.

Website Status must be set to online.

Step 4: Reload the page in your browser

Your browser may be showing an older copy of the page. Reload it with **Ctrl + F5** (Windows) or **Cmd + Shift + R** (Mac), or open your website in a private or incognito window. On a phone, close the tab and open your website again.

Step 5: Check the page you're looking at

Make sure you're looking at the same page you edited, and in the same language if your website has more than one. If you just connected a custom domain, it can take some time before it works. See *My custom domain isn't working yet*.

Still not showing after these steps? Contact our support team and tell us which page you changed.
