How to use the AI Page Editor

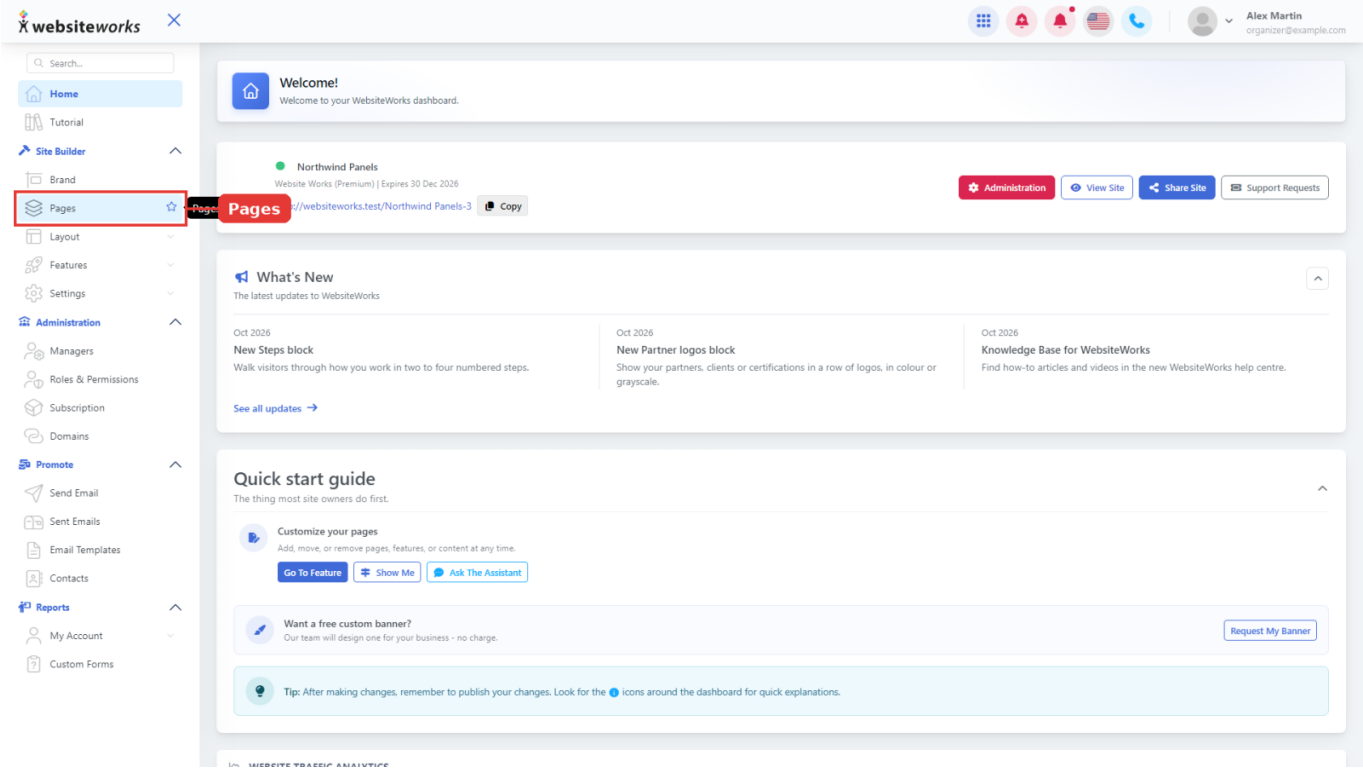

Category: Pages
Published: Nov 06, 2026
Reading Time: 3 min

The AI Page Editor lets you change a page of your WebsiteWorks website by describing what you want in plain language, for example "add a section", "rewrite the intro" or "change the button colours". The AI makes the change in your draft and shows it in the live preview, so you can check it before anything goes live.

Open the page you want to change

1. Go to Pages

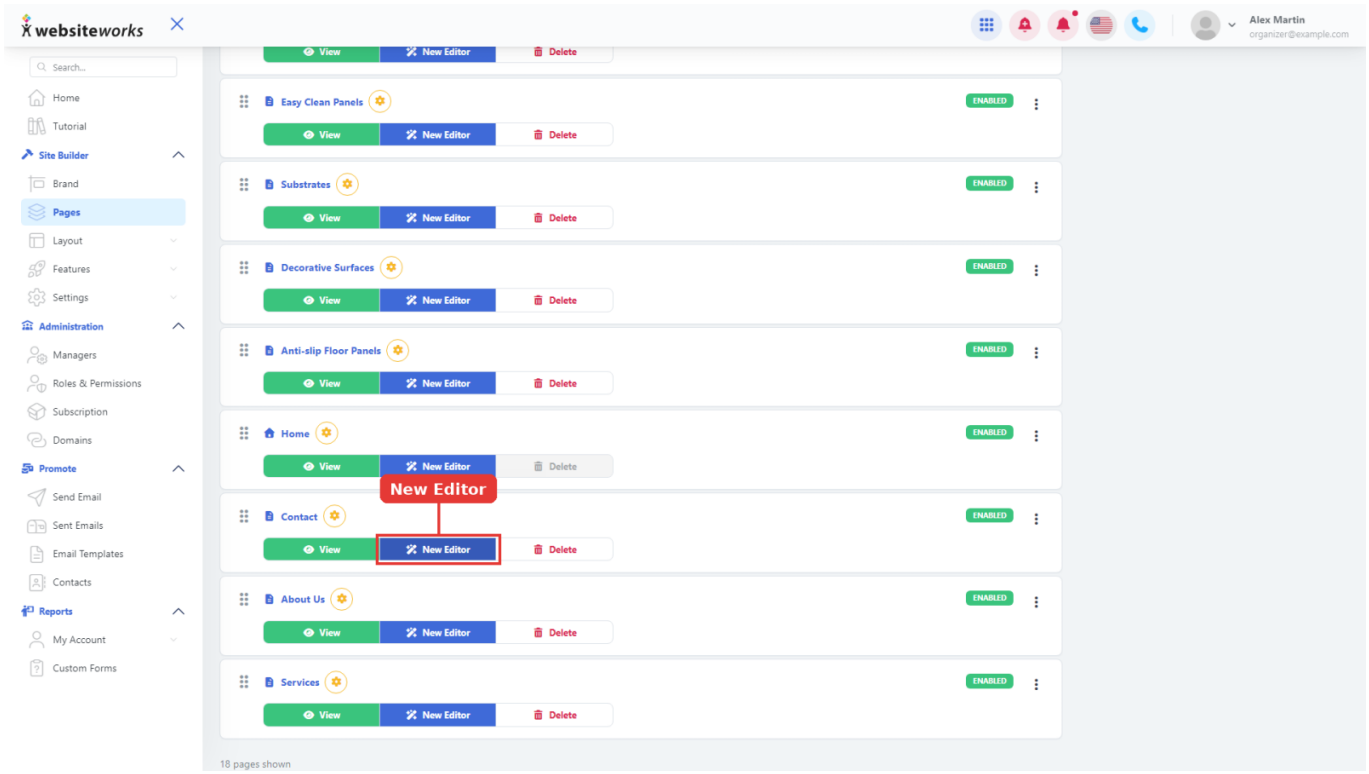

From your dashboard, open **Site Builder** in the menu on the left and click **Pages**.

Go to Pages

2. Click New Editor

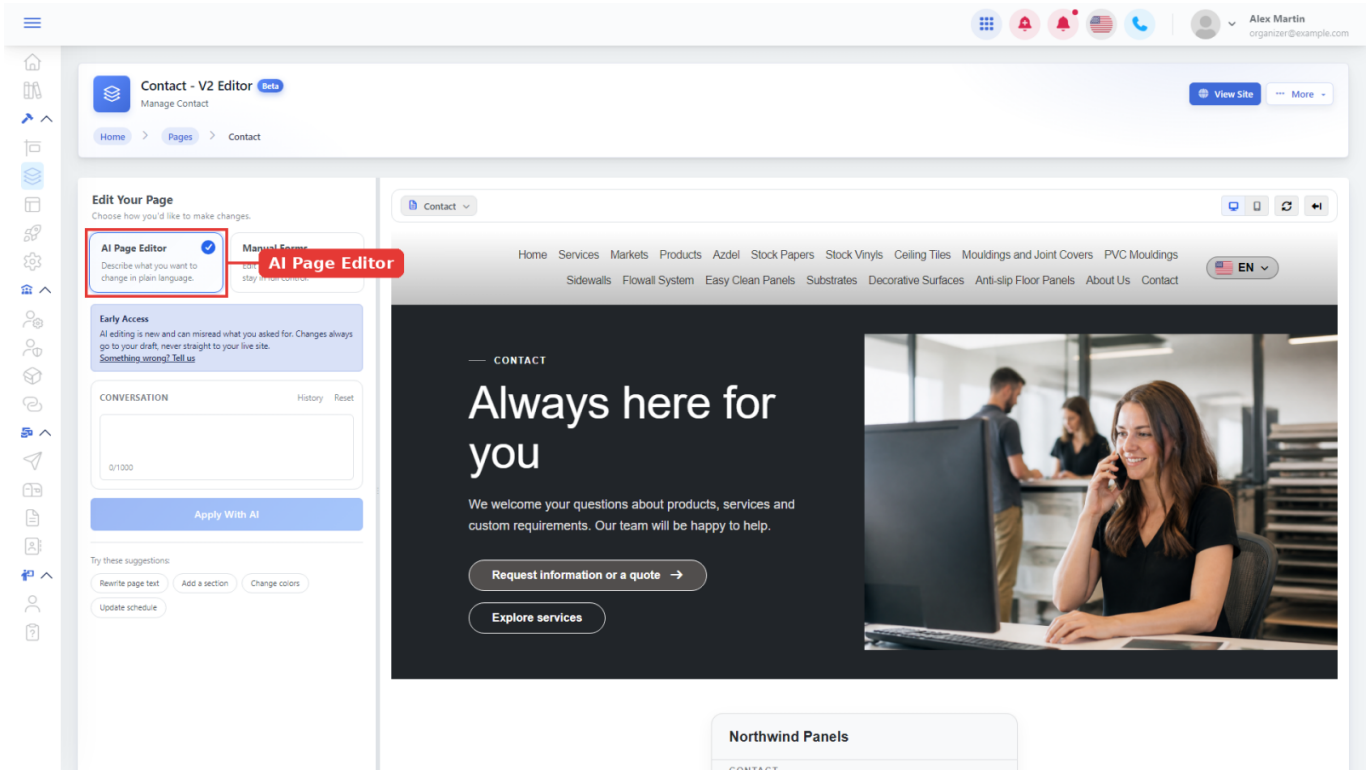

Find the page you want to change and click **New Editor** on its row. The page opens in the editor, with a live preview of your page on the right.

Click New Editor

3. Choose AI Page Editor

Under **Edit Your Page**, click **AI Page Editor** ("Describe what you want to change in plain language"). To edit the fields yourself instead, choose **Manual Forms**.

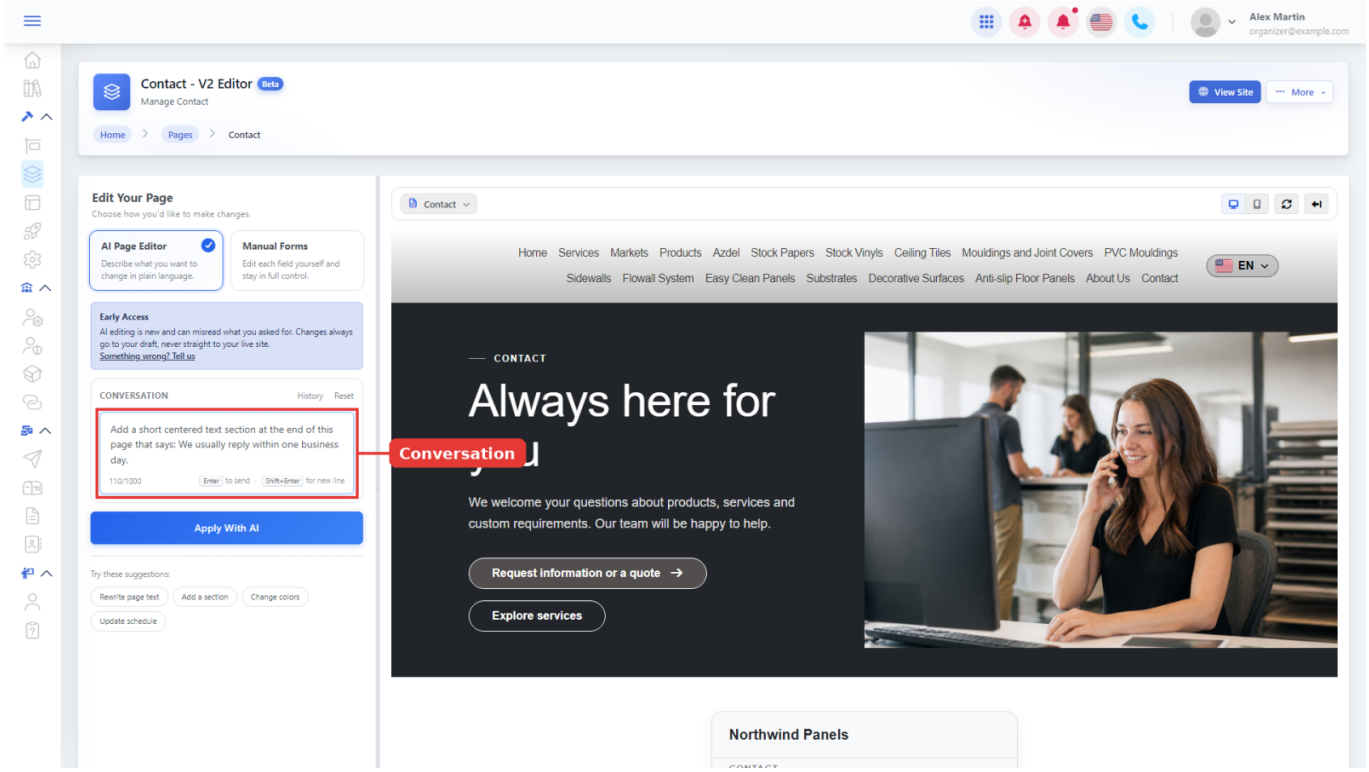

Choose AI Page Editor

Ask the AI for a change

4. Describe your change

In the **Conversation** box, type what you want in plain words, for example: "Add a short centered text

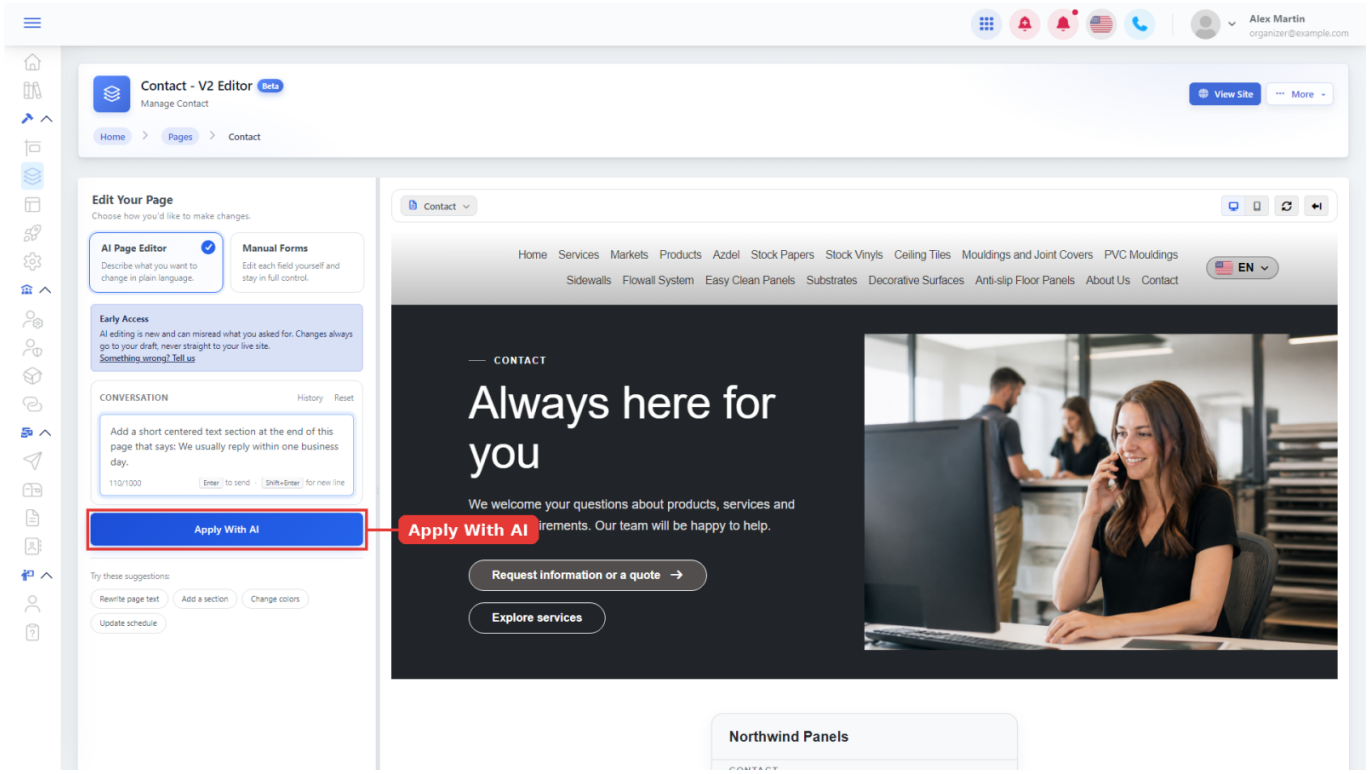

section at the end of this page that says: We usually reply within one business day." You can type up to 1,000 characters. Not sure where to start? Click one of the suggestions under the box: **Rewrite page text**, **Add a section**, **Change colors** or **Update schedule**.

Describe your change

5. Click Apply With AI

Click **Apply With AI**, or press Enter (Shift+Enter adds a new line). It takes a few seconds.

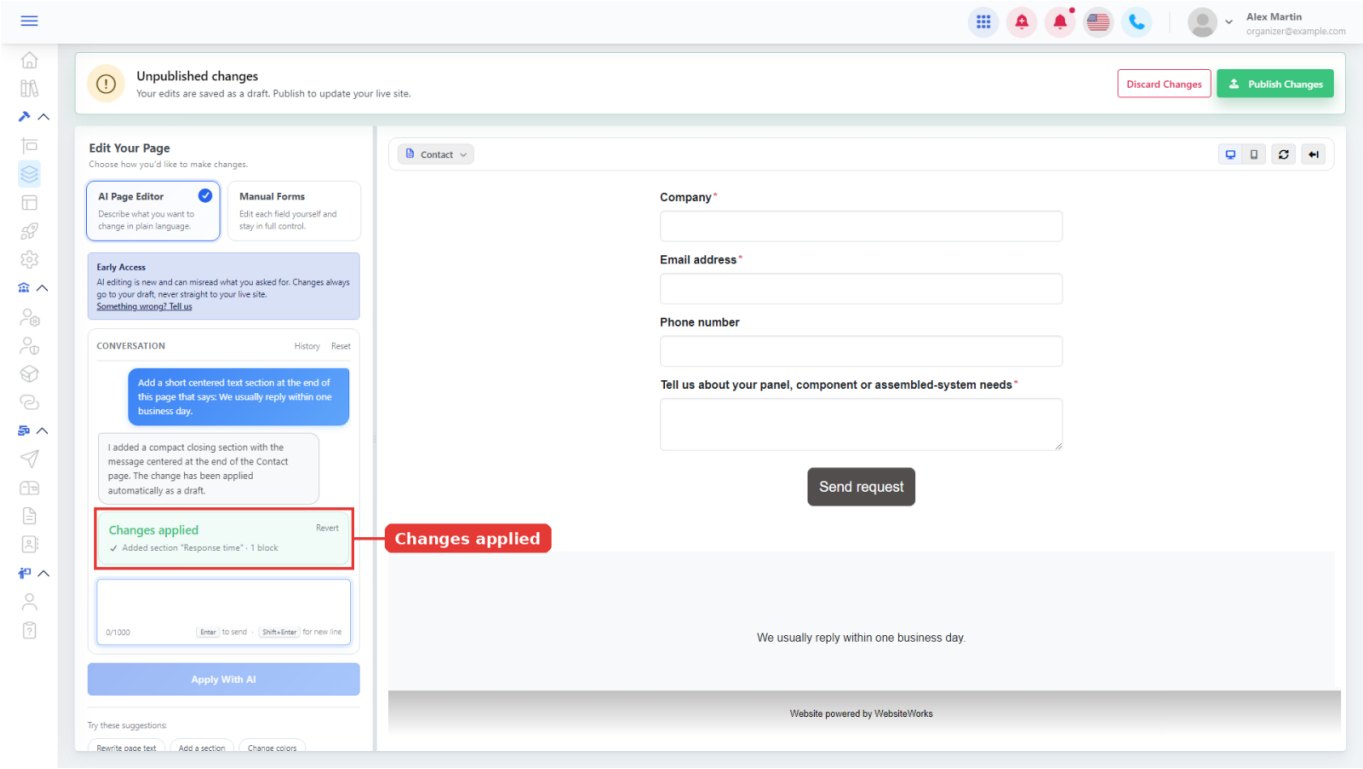

Click Apply With AI

Tip: If the AI needs more detail, it explains its plan and asks you a question first. Answer it in the Conversation box, for example "Yes, go ahead.", and click Apply With AI again.

6. Check the result

The AI explains what it did and a **Changes applied** card lists what changed (here: Added section "Response time" · 1 block). The preview on the right shows your page with the change. You can type a follow-up request to adjust it.

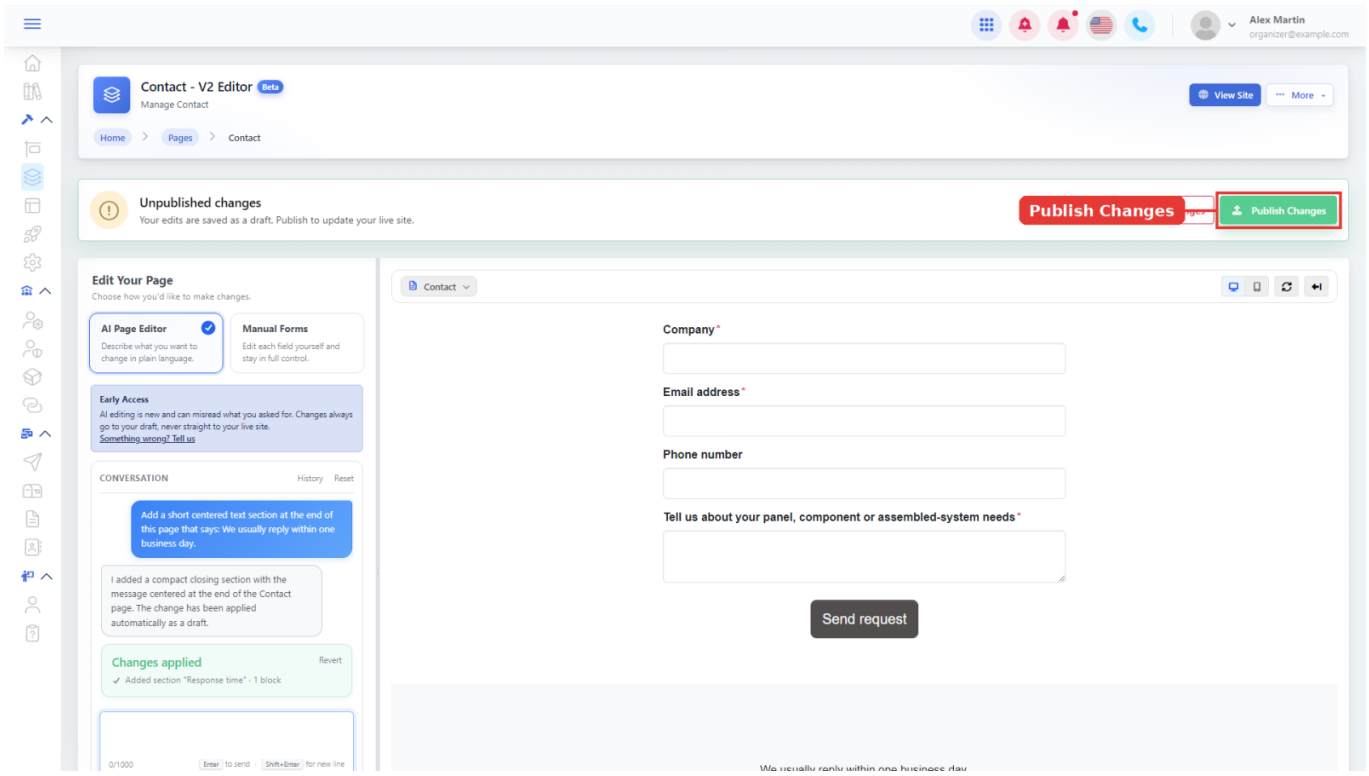

Check the result

Publish or undo the change

7. Publish when you are happy

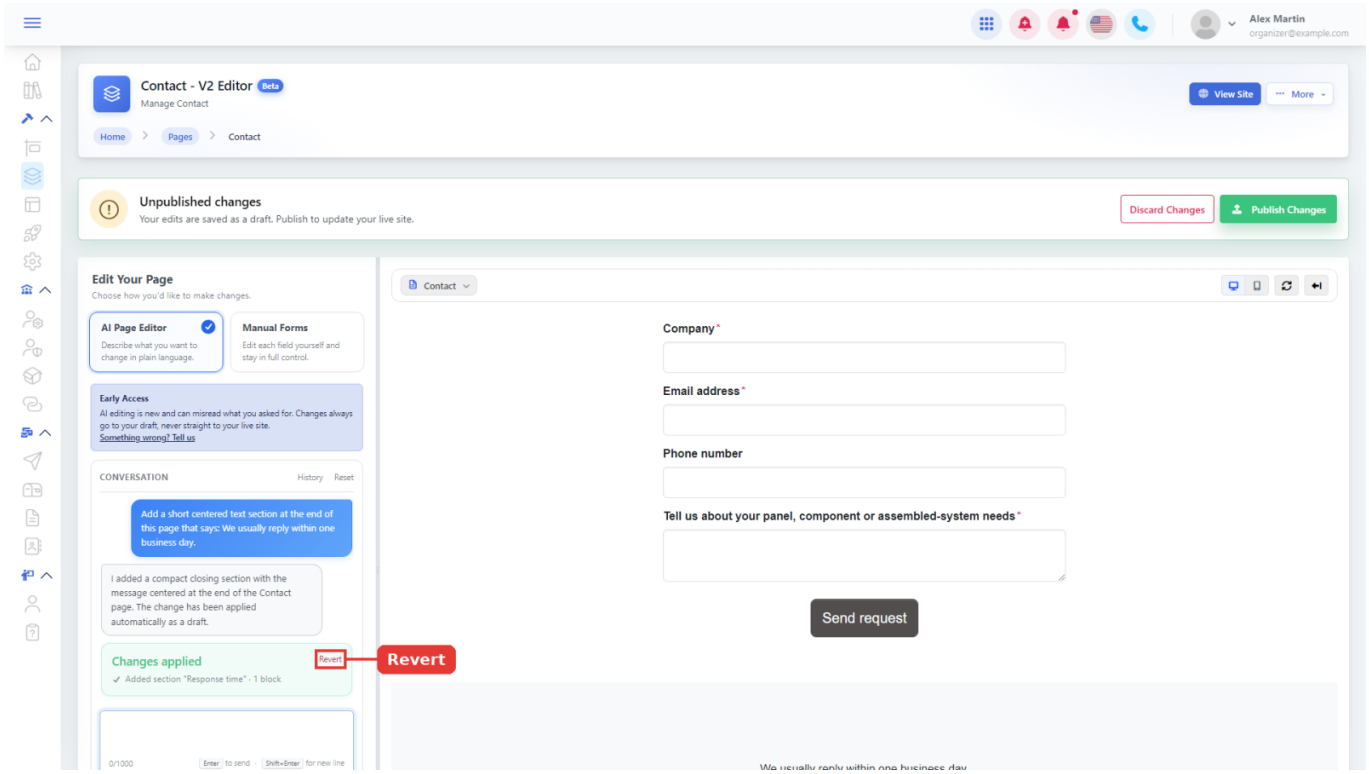

AI changes are saved to your draft, never straight to your live site. The **Unpublished changes** bar at the top reminds you. Click **Publish Changes** to make them live, or **Discard Changes** to drop all your draft edits.

Publish when you are happy

8. Not what you wanted? Click Revert

Click **Revert** on the **Changes applied** card to undo that AI change. Your page goes back to how it was before the request.

Not what you wanted? Click Revert

Good to know

- Be specific: name the section, the text or the colour you want. One change per request works best.

- Want to change one block? Click it in **Manual Forms** first, then switch back to **AI Page Editor**: a **Selected block** chip shows the AI which block you mean.
- You can attach a picture with **Upload image** (JPEG, PNG or GIF, up to 10 MB).
- Click **History** to see earlier conversations, or **Reset** to start a new one.
- AI editing is new (Early Access) and can misread a request. If something goes wrong, click **Something wrong? Tell us** in the editor.
- To make the same change on every page at once, see *How to edit multiple pages with AI*.
