How to edit multiple pages with AI

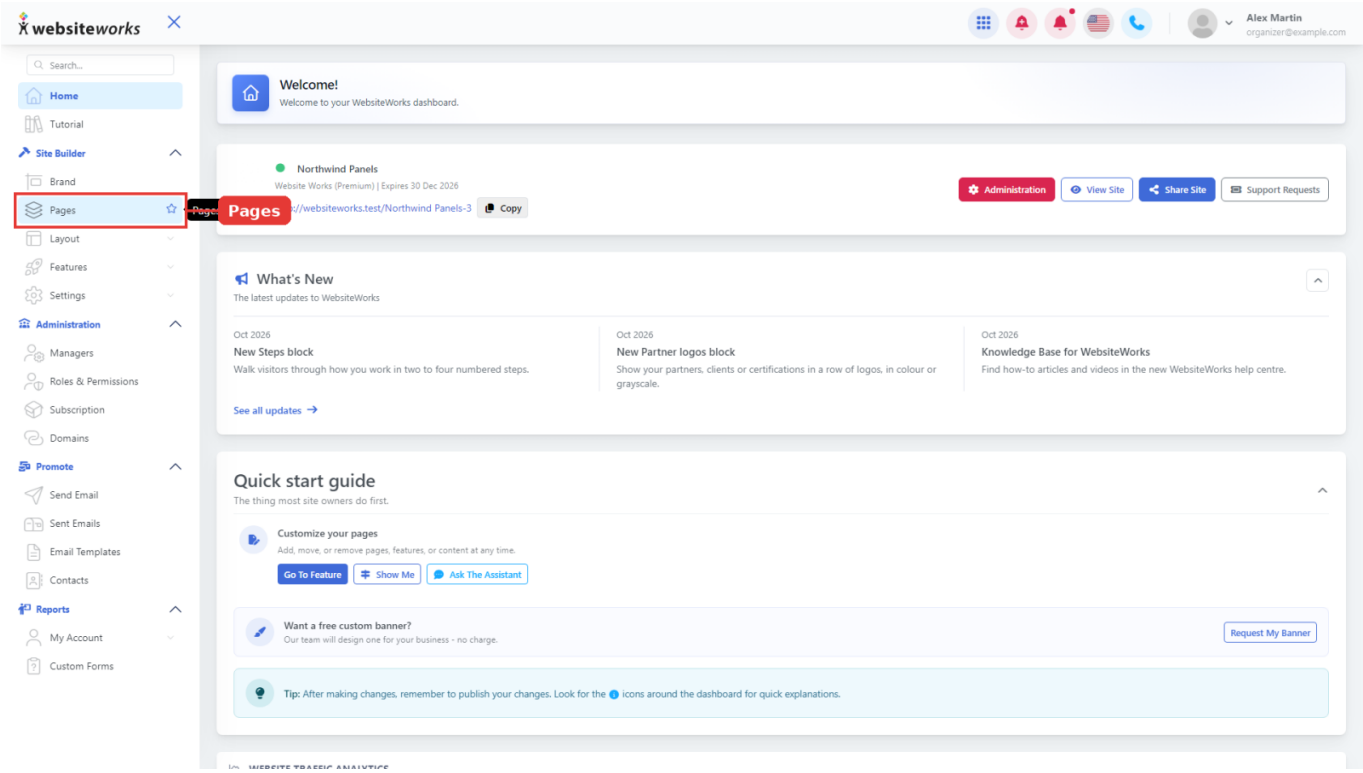

Category: Pages
Published: Nov 06, 2026
Reading Time: 3 min

With the AI Page Editor for all pages, you describe a change once, such as "make all buttons dark blue", and the AI makes it on every page of your WebsiteWorks website. The changes are saved as drafts so you can review them, then publish them all at once or undo them.

Open the AI Page Editor for all pages

1. Go to Pages

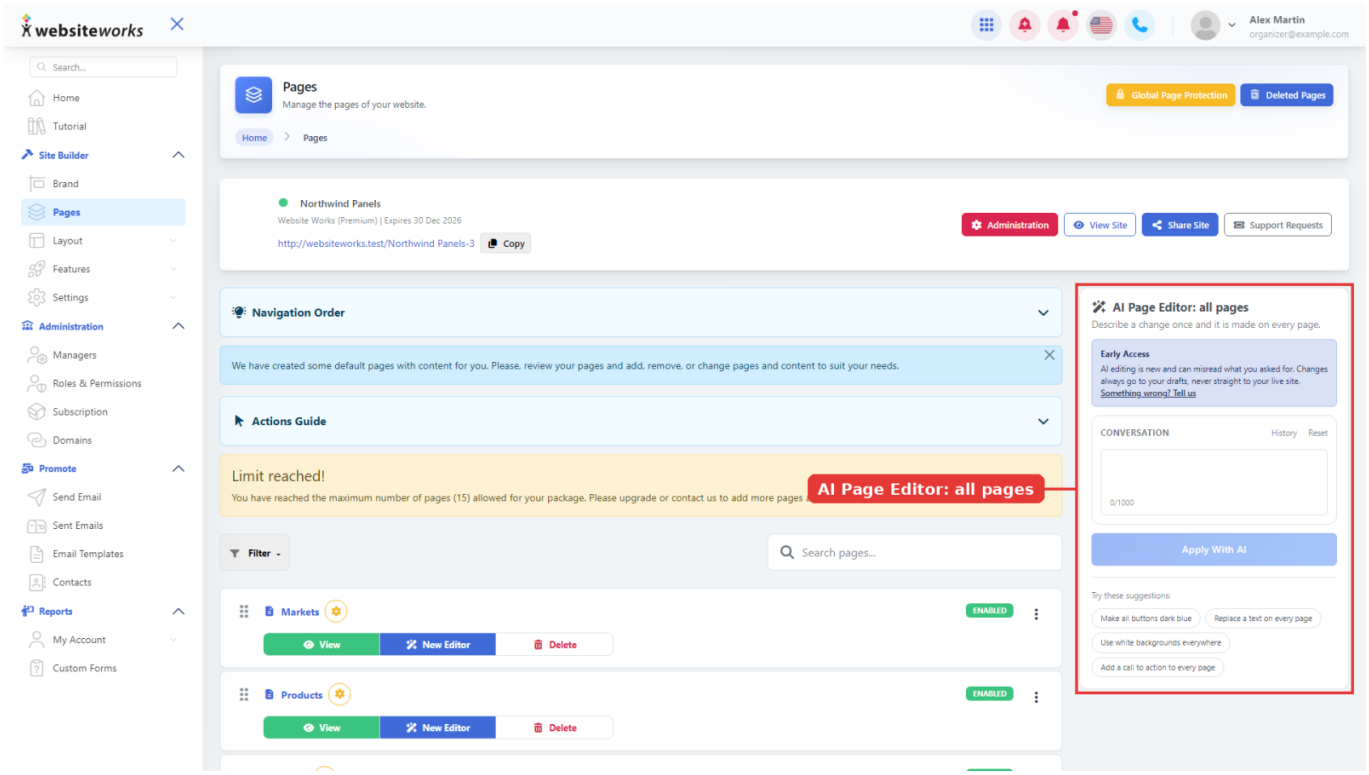

From your dashboard, open **Site Builder** in the menu on the left and click **Pages**.

Go to Pages

2. Find the AI Page Editor: all pages panel

On the right of your page list is the **AI Page Editor: all pages** panel: "Describe a change once and it is made on every page."

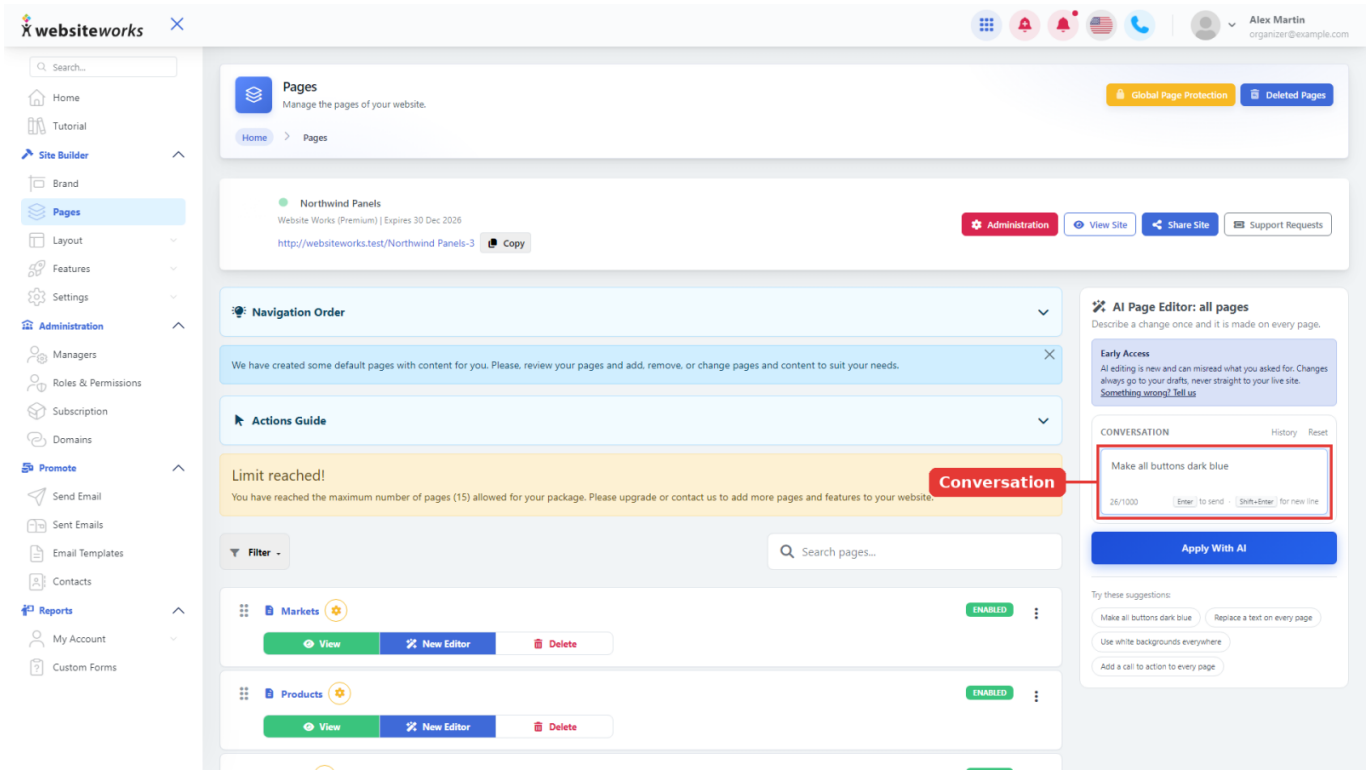

Find the AI Page Editor: all pages panel

Describe your change

3. Type your change

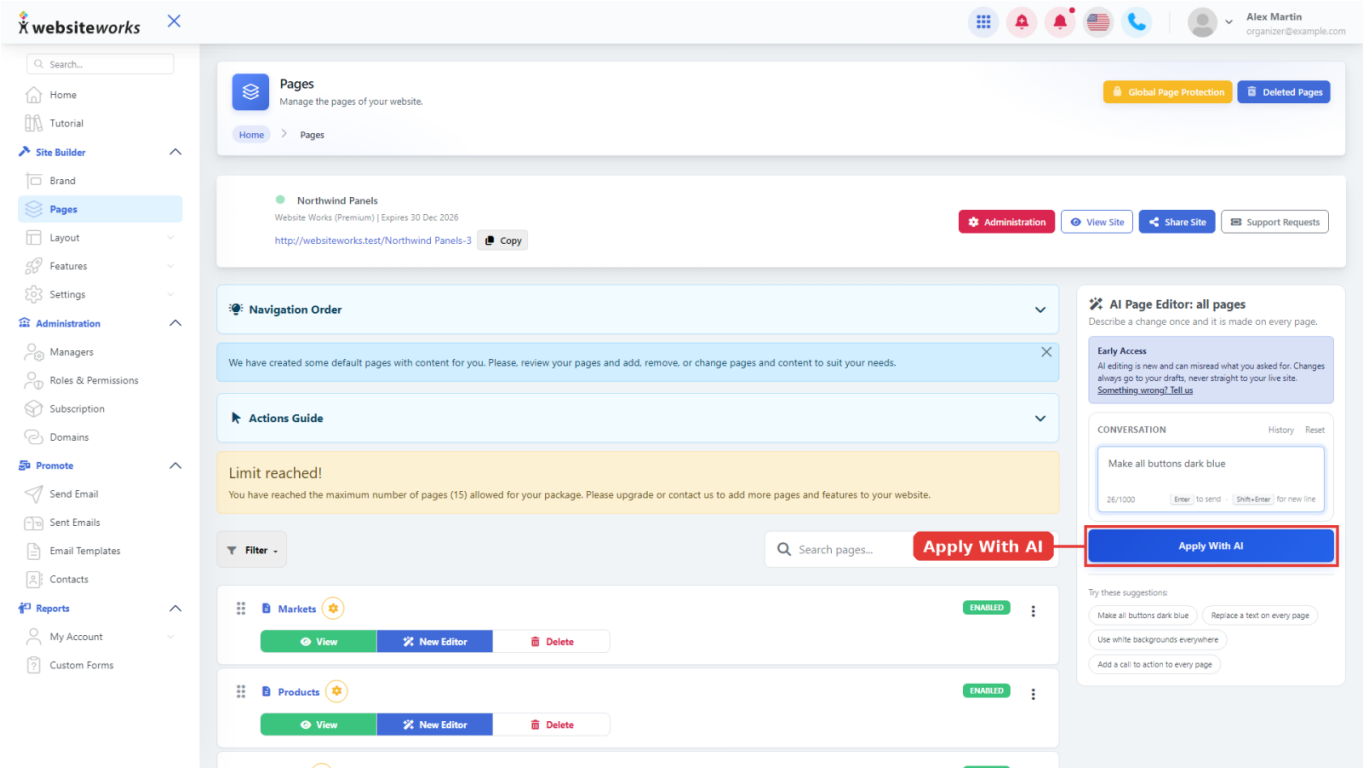

In the **Conversation** box, describe the change you want on every page, for example "Make all buttons dark blue". You can also click a suggestion: **Make all buttons dark blue**, **Replace a text on every page**, **Use white backgrounds everywhere** or **Add a call to action to every page**. To change only some pages, name them in your request.

Type your change

4. Click Apply With AI

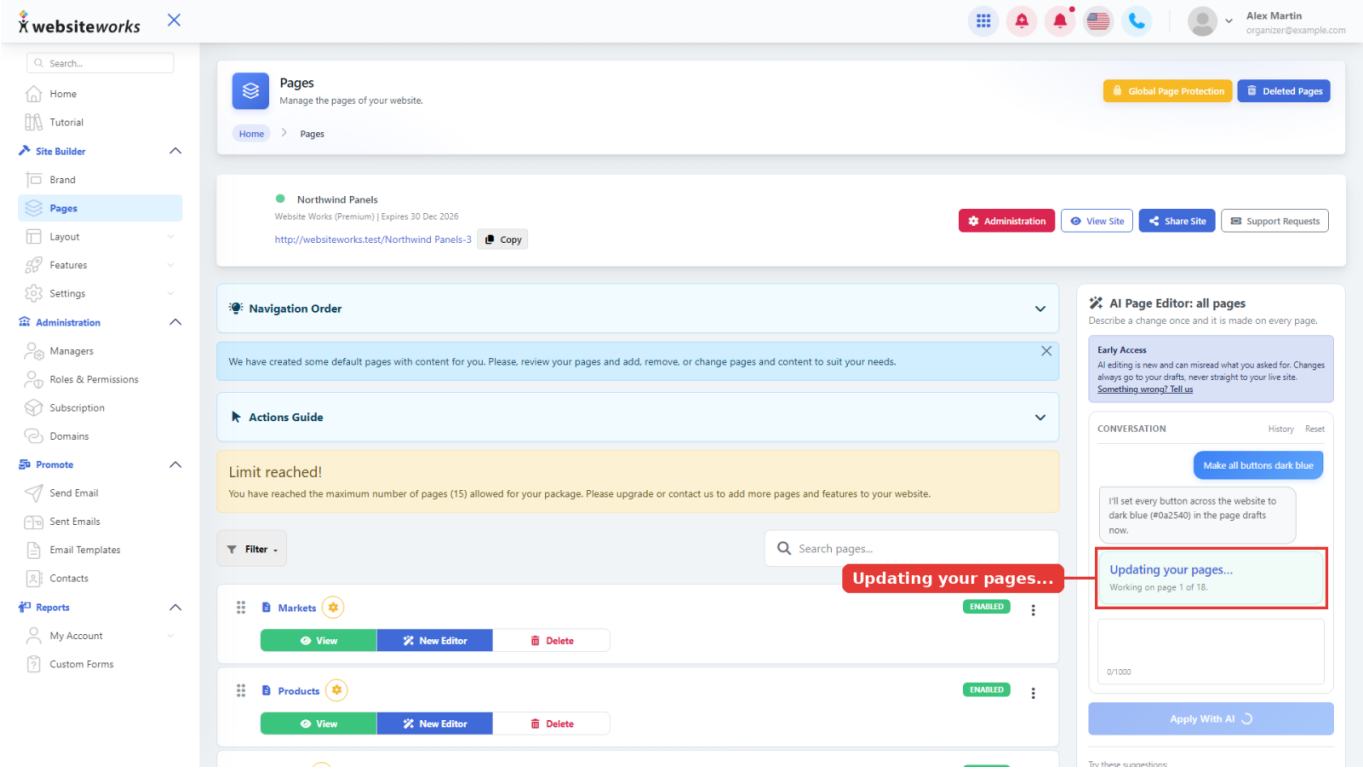

Click **Apply With AI**. The AI confirms what it will do. If it needs more detail, it asks you a question first: answer it and click **Apply With AI** again.

Click Apply With AI

5. Wait while your pages are updated

The panel shows **Updating your pages...** and which page it is working on. You can keep working; only one site-wide change can run at a time.

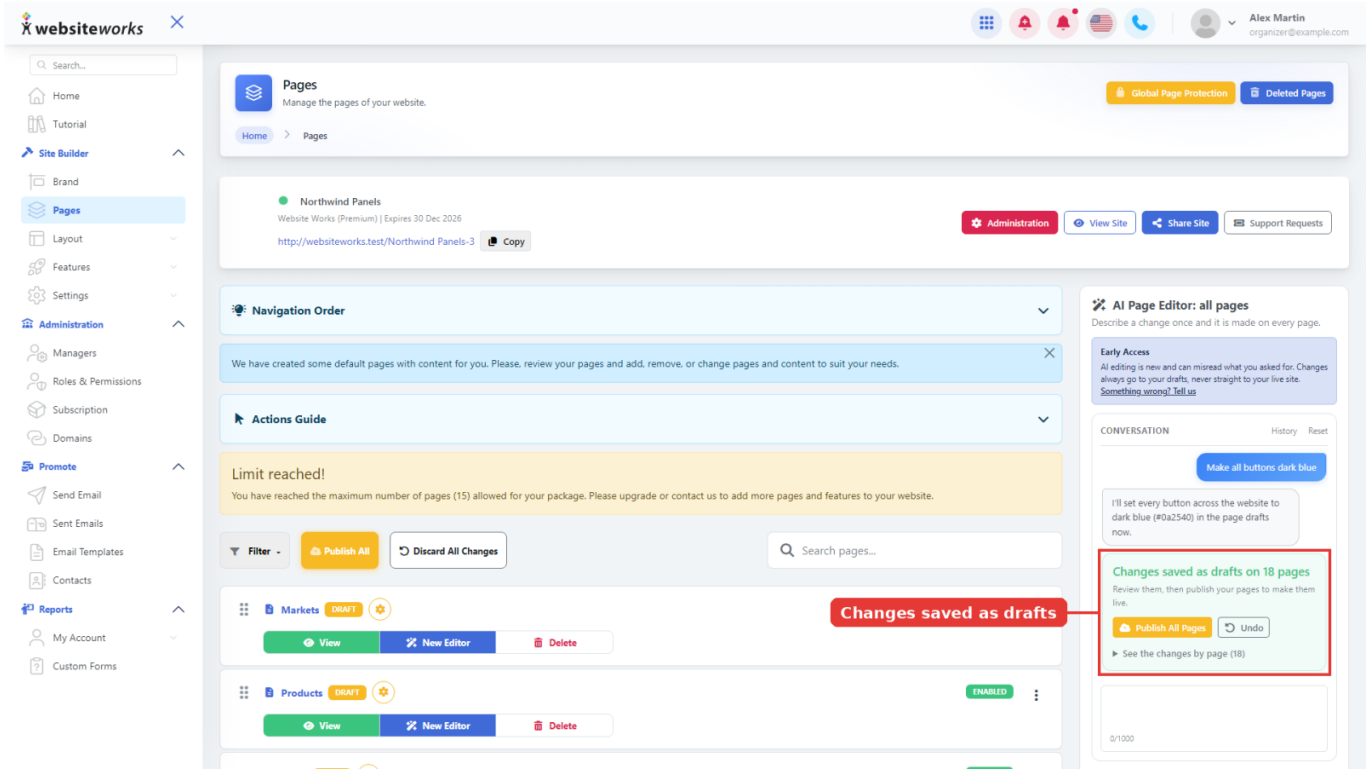

Wait while your pages are updated

Review, publish or undo

6. Check the result

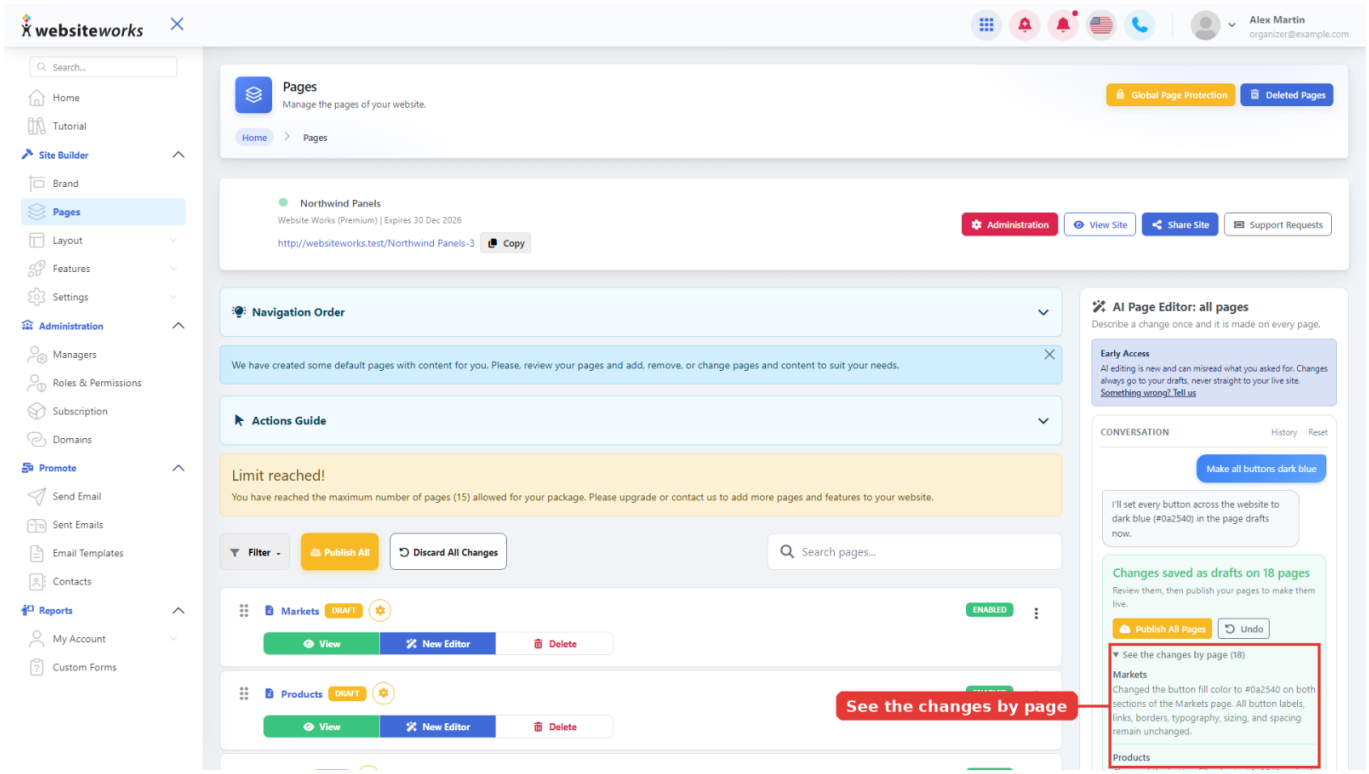

When it is done, the panel shows **Changes saved as drafts on N pages**. Nothing is live yet: review your pages first.

Check the result

7. See what changed on each page

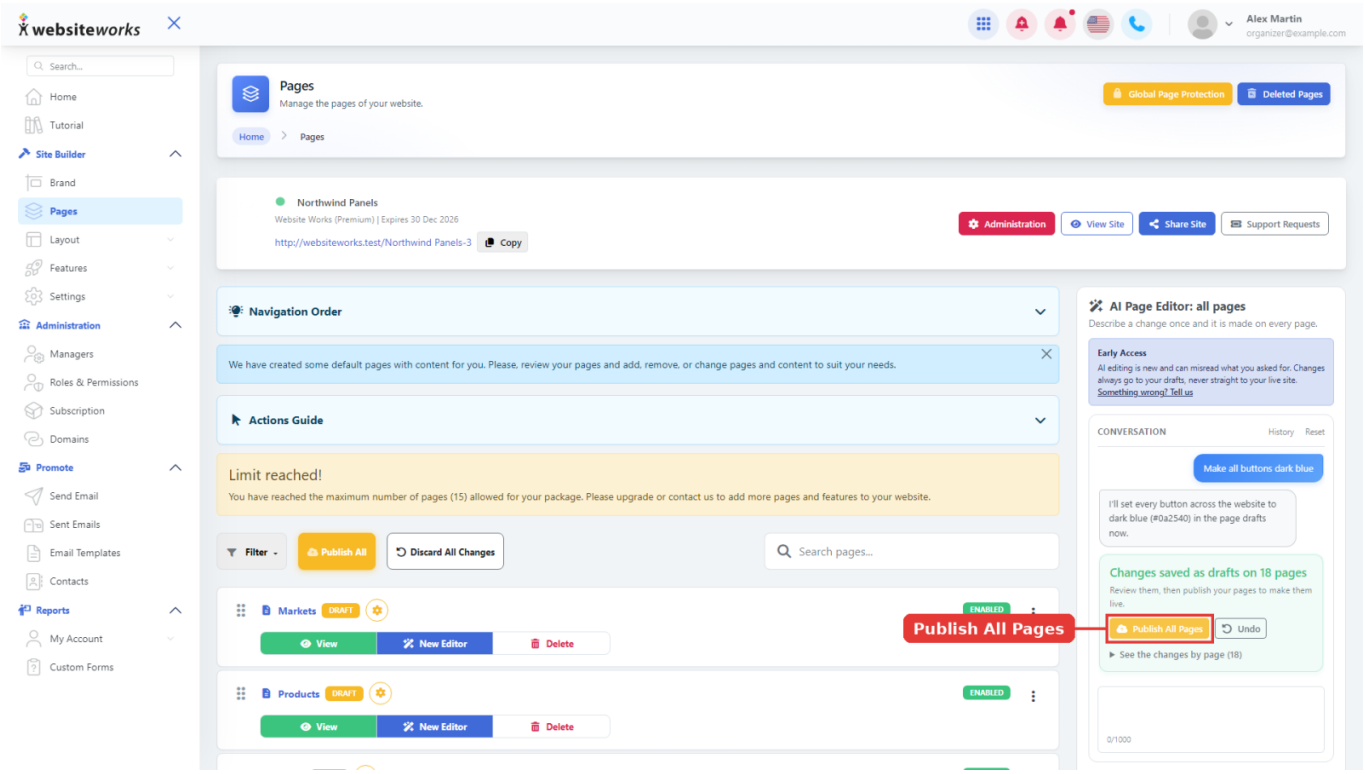

Click **See the changes by page** to list each changed page and what was done on it. Open a page with **New Editor** to look at it in the preview.

See what changed on each page

8. Publish all pages

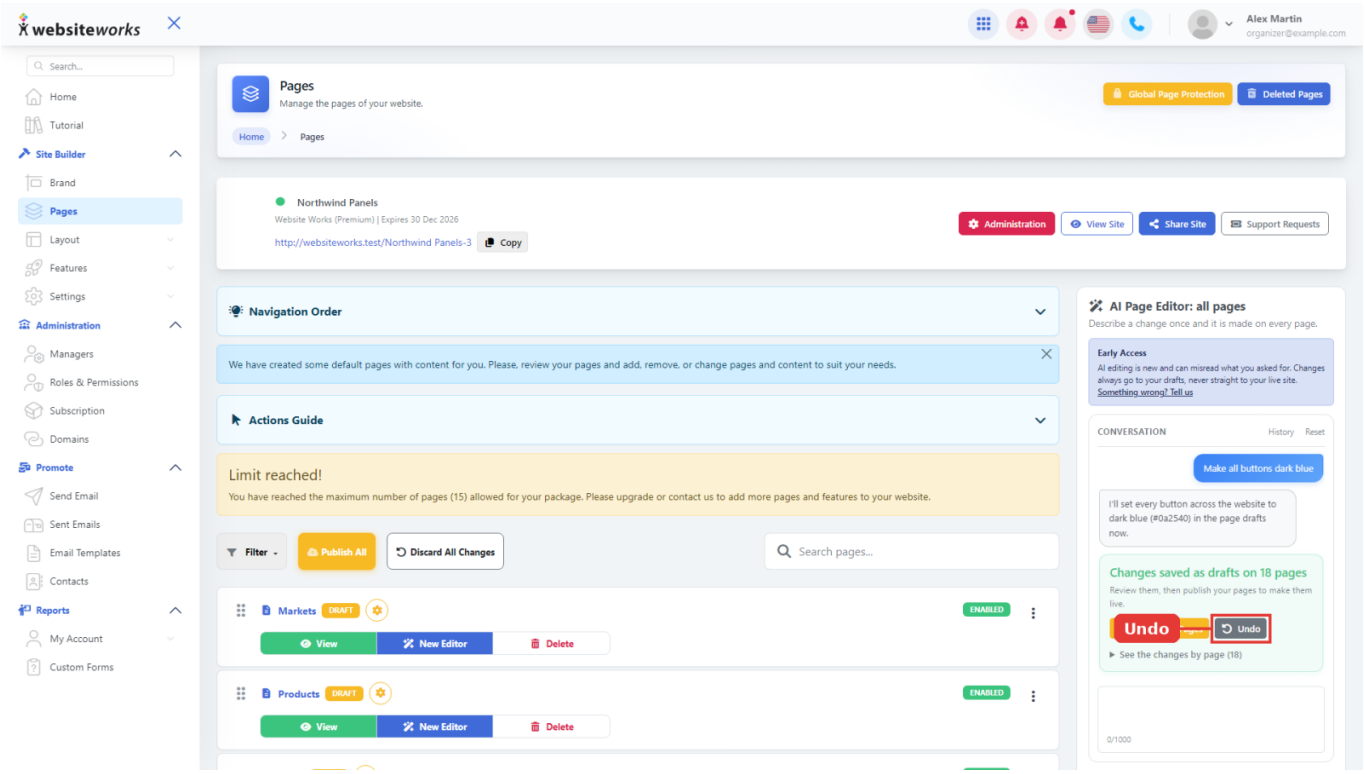

When you are happy, click **Publish All Pages** to make the changes live on your website.

Publish all pages

9. Not what you wanted? Click Undo

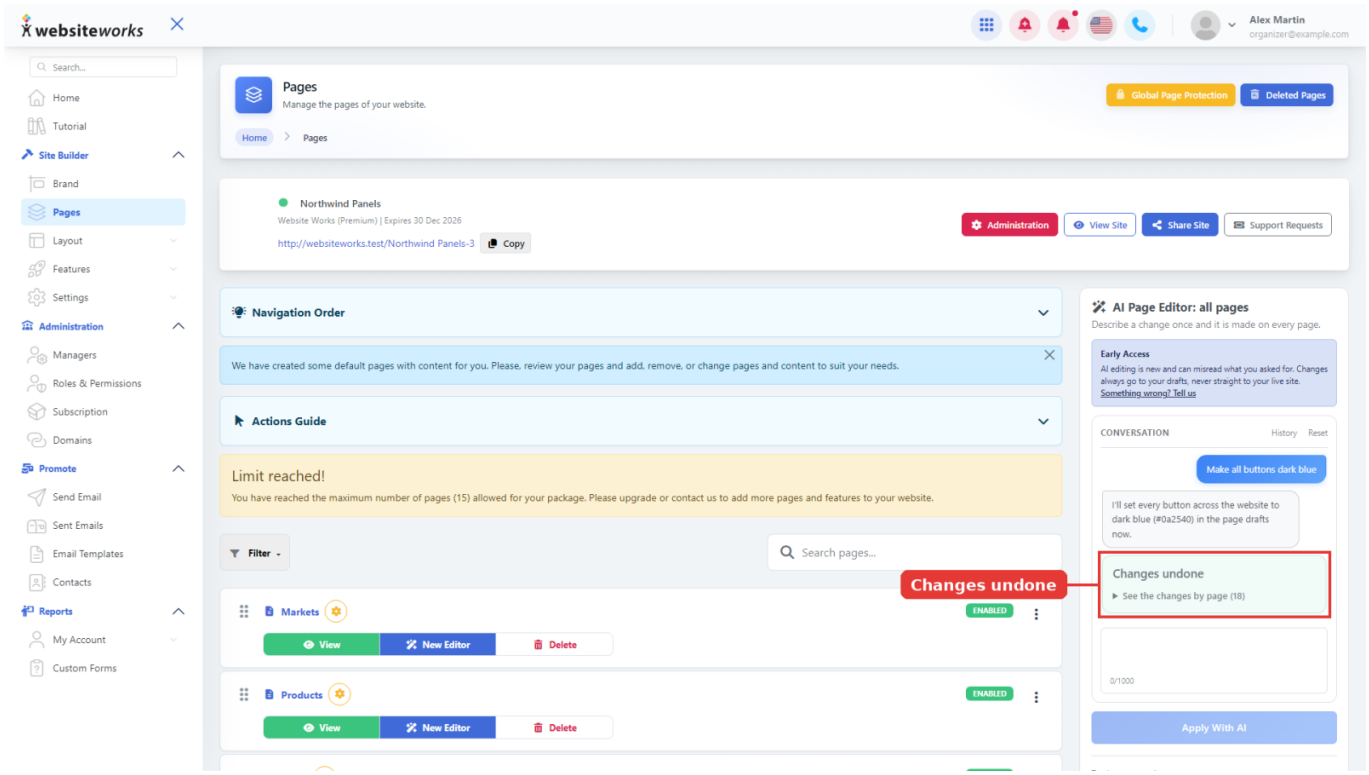

Click **Undo**, then confirm with **OK** in the message "Undo these changes on every page? Any edit or publish made to those pages since then is undone too." Every page goes back to how it was before the request.

Not what you wanted? Click Undo

10. Changes undone

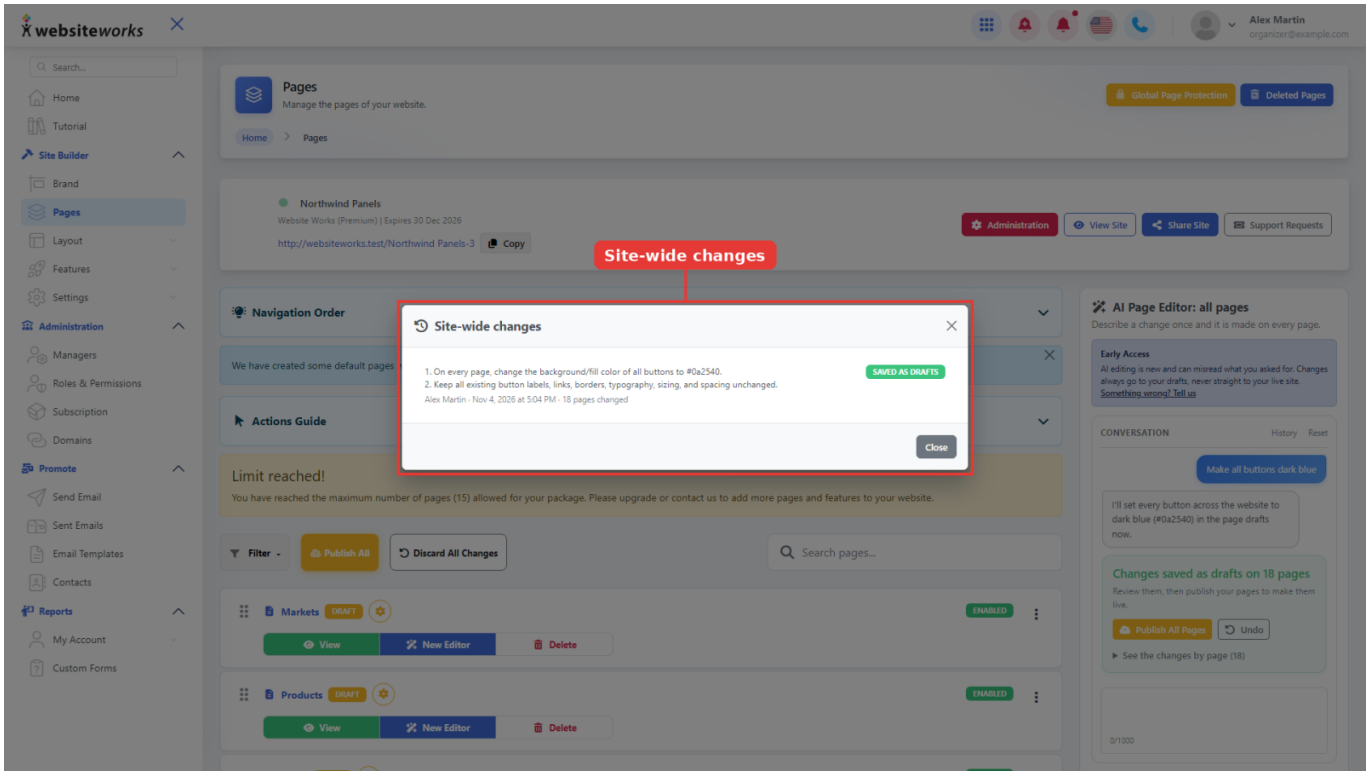

The panel shows **Changes undone**.

Changes undone

11. See past site-wide changes

Click **History** above the Conversation box to open **Site-wide changes**: each request, who made it, when, how many pages changed and its status (for example Saved as drafts or Undone).

See past site-wide changes

Good to know

- Cart and payment pages are left alone unless you name them in your request.
- Changes always go to your drafts, never straight to your live site.

- Requests can be up to 1,000 characters. Be specific about what should change and where.
- To change a single page, use the AI Page Editor inside that page (see *How to use the AI Page Editor*).
- AI editing is new (Early Access) and can misread a request. If something goes wrong, click **Something wrong? Tell us**.
